CDP Climate Change and Water Security Questionnaire 2025

FLEX LTD.

2025 CDP Corporate Questionnaire 2025

Word version

Important: this export excludes unanswered questions

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

Contents

C1. Introduction	2
C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities.....	8
C3. Disclosure of risks and opportunities	27
C4. Governance.....	63
C5. Business strategy	102
C6. Environmental Performance - Consolidation Approach	143
C7. Environmental performance - Climate Change	144
C9. Environmental performance - Water security.....	301
C13. Further information & sign off.....	371

C1. Introduction

(1.1) In which language are you submitting your response?

Select from:

English

(1.2) Select the currency used for all financial information disclosed throughout your response.

Select from:

USD

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

Publicly traded organization

(1.3.3) Description of organization

Flex is the advanced, end-to-end manufacturing partner of choice that helps a diverse customer base design, build, deliver, and manage innovative products that improve the world. Through the collective strength of a global workforce across approximately 30 countries with responsible, sustainable operations, Flex delivers technology innovation, supply chain, and manufacturing solutions to diverse industries and end markets. Our full suite of specialized capabilities includes design and engineering, supply chain, manufacturing, value-added fulfillment and logistics, and aftermarket services. Our purpose is to make great products for our customers that create value and improve people's lives. Our vision is to be the most trusted global technology, supply chain, and manufacturing solutions partner to improve the world, and our mission is to achieve our vision and fulfill our purpose. Sustainability is a cornerstone of making that vision a reality and is embedded in our culture. Our sustainability approach is aligned with global initiatives and spans across our operational footprint and beyond our walls. We align our sustainability strategy and initiatives with several global frameworks, including the Global Reporting Initiative (GRI), United Nations (UN) Sustainable Development Goals (SDGs), and the UN Global Compact (UNGC). The value we bring and the progress we make toward a more sustainable future is enabled by the 140,000+ employees who create the extraordinary every day and are committed to doing the right thing always for our customers, suppliers, investors, and communities. Our 2030 sustainability strategy and goals reflect our commitments across a framework focusing on our world, our people, and our approach to business practices. Our strategy, framework, and commitments focus on reducing environmental impact, investing in communities, advancing a safe and respectful work environment for all, partnering with customers and suppliers to help mitigate value chain emissions, and driving ethical practices with strong transparency. Our sustainability efforts earned recognition from leading organizations, including Ethisphere and CDP, among others. In 2024, Times and Statista included Flex on the World's Best Companies list for the second

consecutive year for leading with innovation and sustainability. We were also recognized by third-party rankings, such as maintaining an A- for CDP climate change and receiving a Gold rating from EcoVadis. As we continue working toward our sustainability strategy and goals, including net zero greenhouse gas emissions by 2040, we remain focused on operating responsibly, meeting the needs of all stakeholders, and driving meaningful progress along with our employees, customers, suppliers, and global communities. Note: In 2024, Flex acquired FreeFlow, a company serving global secondary markets with asset disposition and digital circular economy tracking and reporting capabilities, JetCool, a provider of liquid cooling solutions tailored for the data center market, and Crown Technical Systems, a leader in fully integrated power distribution and protection systems.

[Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

	End date of reporting year	Alignment of this reporting period with your financial reporting period	Indicate if you are providing emissions data for past reporting years
	12/31/2024	Select from: <input checked="" type="checkbox"/> No	Select from: <input checked="" type="checkbox"/> No

[Fixed row]

(1.4.1) What is your organization’s annual revenue for the reporting period?

25584000000

(1.5) Provide details on your reporting boundary.

(1.5.1) Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?

Select from:

No

(1.5.2) How does your reporting boundary differ to that used in your financial statement?

Flex's financial statement information is in a fiscal format (Apr-Mar), while our sustainability information is in a calendar year (Jan-Dec) format. Our current sustainability strategy is following calendar year since our 2030 sustainability goals and our SBTi targets were defined based on it.
 [Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

	Does your organization use this unique identifier?	Provide your unique identifier
Ticker symbol	Select from: <input checked="" type="checkbox"/> Yes	NASDAQ: FLEX

[Add row]

(1.8) Are you able to provide geolocation data for your facilities?

	Are you able to provide geolocation data for your facilities?	Comment
	Select from: <input checked="" type="checkbox"/> No, this is confidential data	<i>We are not able to provide this data at this time.</i>

[Fixed row]

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

- Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

- Upstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

- Tier 1 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

- Tier 4+ suppliers

(1.24.7) Description of mapping process and coverage

On an annual basis we screen the top 80% by spend suppliers through Elevate a tool provided by RBA that offers a singular insight into labor, health and safety, environment, business ethics and management systems. To those suppliers categorized as high risk, we request a supplier assessment questionnaire (SAQ) based on social criteria, environmental criteria, and following the Flex's and RBA's code of conduct. We also conduct an internal risk assessment and cross match this score with the SAQ score to define if a physical audit will be required. This assessment enables us to educate suppliers on their performance and identify areas for improvement. While our suppliers have the authority to take necessary corrective actions, we track them for key risk areas to ensure suppliers address them in a timely manner and conduct on-site audits to verify compliance if needed. In parallel, we screen new global suppliers during the onboarding process using a data audit and risk assessment, improving our onboarding and screening processes by examining any adverse media, reviewing their ESG score, enhancing our sustainability topics, and assessing at-risk regions for forced labor. Suppliers categorized as high-risk will go through the same process as described above. In addition, we have an initial screening conducted by a 3rd party to new global suppliers created in our system, which covers financial health, ESG risk, reputational risk and trade compliance. We also conduct supply chain disruption monitoring that helps us detect and respond to adverse events before they impact our customers. This helps us have an early action that is critical in reducing business impact and quickly recover from unexpected situations. Our monitoring scope includes natural disasters, geopolitical issues, industrial incidents, and logistics constraints, focusing on Tier-1 and critical sub-tier suppliers.

[Fixed row]

(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?

(1.24.1.1) Plastics mapping

Select from:

- Yes, we have mapped or are currently in the process of mapping plastics in our value chain

(1.24.1.2) Value chain stages covered in mapping

Select all that apply

- Direct operations

- Upstream value chain
- Downstream value chain
- End-of-life management

(1.24.1.4) End-of-life management pathways mapped

Select all that apply

- Recycling
- Waste to Energy
- Incineration
- Other, please specify :Preparation for reuse/repair/harvesting

[Fixed row]

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

3

(2.1.3) To (years)

5

(2.1.4) How this time horizon is linked to strategic and/or financial planning

2025 – 2027: Our goals to date have primarily been short-term goals. This is also the time horizon used in our company strategy.

Medium-term

(2.1.1) From (years)

5

(2.1.3) To (years)

10

(2.1.4) How this time horizon is linked to strategic and/or financial planning

2027 – 2032: Recently announced 2030 sustainability goals follow this time horizon, to initiate longer-term efforts than before. Some of our customer partnerships have a medium-term planning horizon. In addition, human resources and real estate planning are also evaluated over a medium-term horizon.

Long-term

(2.1.1) From (years)

10

(2.1.2) Is your long-term time horizon open ended?

Select from:

No

(2.1.3) To (years)

25

(2.1.4) How this time horizon is linked to strategic and/or financial planning

2032 – 2047: From a research and projections standpoint, we use a long-term planning horizon. In 2022, we doubled down on our climate action by announcing our most ambitious long-term commitment to date, reaching net-zero greenhouse gas emissions by 2040.

[Fixed row]

(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both dependencies and impacts

[Fixed row]

(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?

	Process in place	Risks and/or opportunities evaluated in this process	Is this process informed by the dependencies and/or impacts process?
	<i>Select from:</i> <input checked="" type="checkbox"/> Yes	<i>Select from:</i> <input checked="" type="checkbox"/> Both risks and opportunities	<i>Select from:</i> <input checked="" type="checkbox"/> Yes

[Fixed row]

(2.2.2) Provide details of your organization’s process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.

Row 1

(2.2.2.1) Environmental issue

Select all that apply

- Climate change

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

- Dependencies
- Impacts
- Risks
- Opportunities

(2.2.2.3) Value chain stages covered

Select all that apply

- Direct operations
- Upstream value chain
- Downstream value chain

(2.2.2.4) Coverage

Select from:

- Full

(2.2.2.5) Supplier tiers covered

Select all that apply

- Tier 1 suppliers

(2.2.2.7) Type of assessment

Select from:

- Qualitative and quantitative

(2.2.2.8) Frequency of assessment

Select from:

- More than once a year

(2.2.2.9) Time horizons covered

Select all that apply

- Short-term
- Medium-term
- Long-term

(2.2.2.10) Integration of risk management process

Select from:

- Integrated into multi-disciplinary organization-wide risk management process

(2.2.2.11) Location-specificity used

Select all that apply

- Site-specific

(2.2.2.12) Tools and methods used

Enterprise Risk Management

- Enterprise Risk Management
- Internal company methods

Other

- External consultants
- Scenario analysis

(2.2.2.13) Risk types and criteria considered

Acute physical

- Drought
- Wildfires
- Heat waves
- Cyclones, hurricanes, typhoons
- Heavy precipitation (rain, hail, snow/ice)
- Flood (coastal, fluvial, pluvial, ground water)
- Storm (including blizzards, dust, and sandstorms)

Chronic physical

- Changing precipitation patterns and types (rain, hail, snow/ice)
- Heat stress
- Increased severity of extreme weather events

Policy

- Changes to international law and bilateral agreements

Reputation

- Impact on human health

Liability

- Non-compliance with regulations

(2.2.2.14) Partners and stakeholders considered

Select all that apply

- Customers
- Employees
- Investors
- Local communities
- Suppliers

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- No

(2.2.2.16) Further details of process

Our facilities include a network of design, engineering, manufacturing, and logistics in 30 countries, across 100 locations. Our worldwide supply chain embraces over 16,000 direct, indirect and vertically integrated suppliers, most of whom are controlled by our customers. Our company-wide risk identification and assessment process includes the following potential climate-related risks: current and emerging regulatory requirements; new customer requirements; interrupted supply of energy, raw materials or components; brand/reputation; and potential business interruption or facility damage, including those from frequent and/or extreme weather events. Flex identifies, assesses, and determines risks with a substantive financial impact through company-wide processes, e.g. annual materiality assessments and operational and supply chain risk assessments. To determine which sustainability topics are most relevant to our business, in our materiality assessment, we identify topics with the greatest influence for stakeholders, analyze feasibility of impact on stakeholders, and filter topics by geography and functional areas. Our stakeholders include employees, customers, suppliers, shareholders, industry associations, unions, non-governmental organizations (NGOs), governments, and relevant regulatory agencies. To evaluate climate-related transitional risks and opportunities, our sustainability team monitors changes in global climate regulations and evaluates applicability and relevance to our operations. The sustainability team and an in-house legal counsel use web-based and in-person methods to identify,

analyze, and respond to relevant climate-related risks. The Sustainability team regularly engages in dialogue with industry workgroups, trade associations, and other forums as part of our risk identification process. Our Sustainability team also engages with the Corporate Real Estate and Facilities team which ensures that resources are in place to mitigate potential risks at the regional and site level in all locations where we operate. To identify and evaluate site-level risks from physical climate-related impacts, conduct resilience assessments across our facilities, and develop scorecards. Our facilities globally are required to adopt and implement our social and environmental management systems, to methodically identify, address, mitigate, and control site-level risks. All sites are audited against the Responsible Business Alliance (RBA) audit protocol, including climate-related controls, and they have emergency and business continuity plans in place. To identify and assess our suppliers' climate-related risk exposure, we monitor compliance with our sustainability standards. We require our suppliers to have a management system in place to ensure the continuity and effectiveness of their social and environmental activities and to mitigate potential risks. Through supplier training sessions, onsite audits, screenings, and self-assessment questionnaires, we identify potential risks and flag sites for compliance audits. Results from Sustainability and EHS Regional Leads, operational and supply chain assessments are reported monthly to the Head of Global Sustainability. Key risks identified are flagged and prioritized for mitigation based on impact and likelihood. Top risks are reported to the Executive Leadership Team and the Nominating and Governance Committee of our board of directors for further evaluation and mitigation.

Row 2

(2.2.2.1) Environmental issue

Select all that apply

- Water

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

- Dependencies
- Impacts
- Risks
- Opportunities

(2.2.2.13) Risk types and criteria considered

Acute physical

- Drought
- Wildfires
- Heat waves
- Cyclones, hurricanes, typhoons
- Heavy precipitation (rain, hail, snow/ice)
- Flood (coastal, fluvial, pluvial, ground water)
- Storm (including blizzards, dust, and sandstorms)

Chronic physical

- Changing precipitation patterns and types (rain, hail, snow/ice)
- Groundwater depletion
- Water stress

Policy

- Changes to international law and bilateral agreements

Reputation

- Impact on human health

Liability

- Non-compliance with regulations

(2.2.2.14) Partners and stakeholders considered

Select all that apply

- Customers
- Employees
- Investors
- Local communities
- Water utilities at a local level
- Other water users at the basin/catchment level

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- No

(2.2.2.16) Further details of process

We require all our sites to adopt our social and environmental management system to manage water-related risks. We conduct annual global water risk assessments using WRI Aqueduct to identify locations exposed to high risks and those representing more than 1% of our global sales. In 2024, we found that some of our high water-consuming facilities are in water-stressed regions. Results from these assessments are reported quarterly to the VP of CREF and the Head of Sustainability and discussed with Audit and Risk Management Services (ARMS). Our annual ERM process includes input from compliance-area owners and senior management. Key risks are flagged by region and prioritized for mitigation. We require our suppliers to follow our Supplier Code of Conduct and have a management system to ensure the continuity and effectiveness of their social and environmental activities. Annually, we screen the top 80% of spend suppliers using the RBA's Elevate tool. High-risk suppliers must complete a supplier assessment questionnaire (SAQ) based on social and environmental criteria. We conduct internal risk assessments and cross-match scores with the SAQ to determine if a physical audit is needed. This process helps educate suppliers on their performance and identify areas for improvement. We also screen new global suppliers during onboarding, examining adverse media, ESG scores, and assessing at-risk regions for forced labor. High-risk suppliers go through the same process. Our human rights due diligence includes regular risk assessments, training programs, and supplier self-assessment questionnaires aligned with RBA standards. We monitor compliance through audits and engage with stakeholders to address identified risks. Supplier contracts are updated to reflect evolving regulations, requiring adherence to our Supplier Code of Conduct and the RBA Code. These measures help us proactively identify, mitigate, and remediate human rights risks throughout our value chain. Flex values feedback from internal and external stakeholders, including employees,

customers, shareholders, investors, suppliers, subcontractors, governments/regulatory agencies, unions, NGOs, and industry associations. We respond to all concerns identified during the engagement process and update our materiality assessment annually based on stakeholder requests. Other water-related engagements include our labor agent sustainability assessments. In 2024, we audited all seven labor agencies we worked with for dispatched workers in China. The findings guide our decisions regarding the approval or rejection of agents as Flex partners. The most common issues identified were related to insufficient social insurance and wage-related concerns. Only approved agents can conduct business with our organization.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

Yes

(2.2.7.2) Description of how interconnections are assessed

Flex has standards and procedures in place that describe a process for systematically determining the environmental aspects of Flex’ site activities, products, and services it can control and those that it influences, and their associated environmental impacts, considering a life cycle perspective.

[Fixed row]

(2.3) Have you identified priority locations across your value chain?

	Identification of priority locations	Primary reason for not identifying priority locations	Explain why you do not identify priority locations
	Select from: <input checked="" type="checkbox"/> No, and we do not plan to within the next two years	Select from: <input checked="" type="checkbox"/> Not an immediate strategic priority	Not an immediate strategic priority

[Fixed row]

(2.4) How does your organization define substantive effects on your organization?

Risks

(2.4.1) Type of definition

Select all that apply

- Qualitative
- Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

- Revenue

(2.4.3) Change to indicator

Select from:

- % decrease

(2.4.4) % change to indicator

Select from:

- 1-10

(2.4.6) Metrics considered in definition

Select all that apply

- Likelihood of effect occurring

(2.4.7) Application of definition

For CDP reporting purposes, we define a substantive financial impact as one that could create a 15M to 25M charge to our statement of operations, resulting in a three to five penny per share negative impact, therefore the measure used to identify substantive change is the decrease in share value. The threshold of change in this measure is a three to five penny per share negative impact. A description of the quantifiable indicator(s) used to define substantive financial or strategic impact: The description of the quantifiable indicator used to define substantive financial or strategic impact: a one penny loss in earnings per share for every five million USD loss in our earnings, meaning that any event that hits our earnings up to five million USD would result in a loss of one penny per share.

Opportunities

(2.4.1) Type of definition

Select all that apply

- Qualitative
- Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

- Revenue

(2.4.3) Change to indicator

Select from:

- % increase

(2.4.4) % change to indicator

Select from:

- 1-10

(2.4.6) Metrics considered in definition

Select all that apply

- Likelihood of effect occurring

(2.4.7) Application of definition

For CDP reporting purposes, we define a substantive financial impact as one that could create a 15M to 25M charge to our statement of operations, resulting in a three to five penny per share negative impact, therefore the measure used to identify substantive change is the decrease in share value. The threshold of change in this measure is a three to five penny per share positive impact.

[Add row]

(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?

(2.5.1) Identification and classification of potential water pollutants

Select from:

- Yes, we identify and classify our potential water pollutants

(2.5.2) How potential water pollutants are identified and classified

Potential water pollutants are identified and classified through a systematic process that involves several key steps: Identification of Pollutant Sources: this involves defining sources of pollutants for water supply, wastewater, and stormwater. An analysis is conducted to determine if there are any contaminants which can enter surface and groundwater bodies. This includes evaluating external sources like chemical storage facilities. Pollutants found in wastewater are categorized into three main groups: Metals: Elements that can be toxic in certain concentrations. Inorganic Compounds (Non-metals): These include various non-metallic substances that can affect water quality. Organic Compounds: Chemical compounds that contain carbon and can be harmful to aquatic life and human health. Regarding stormwater, activities are defined that may impact stormwater. Based on these activities, potential pollutants are identified. This includes assessing risks for potential spills and leaks and recording the respective pollutants. By following these steps, potential water pollutants are systematically identified and classified, ensuring that water quality is maintained, and legal and internal standards are met. Wastewater discharge, stormwater and water supply must comply with legal standards. In the absence of such standards, internal Flex standards are used to ensure safety and compliance.

[Fixed row]

(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.

Row 1

(2.5.1.1) Water pollutant category

Select from:

- Inorganic pollutants

(2.5.1.2) Description of water pollutant and potential impacts

Arsenic, Asbestos (fiber 10 micrometers), Barium, Cadmium, Chromium (total), Copper, Cyanide (as free cyanide), Fluoride, Lead, Mercury (inorganic) – human health impact, ecosystems impact

(2.5.1.3) Value chain stage

Select all that apply

- Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Industrial and chemical accidents prevention, preparedness, and response
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements

(2.5.1.5) Please explain

Flex identifies and classifies inorganic pollutants in our water supply, wastewater, and stormwater. If levels are detected, pollutants are dealt with in compliance with internal and legal standards.

Row 2

(2.5.1.1) Water pollutant category

Select from:

- Nitrates

(2.5.1.2) Description of water pollutant and potential impacts

Nitrate (measured as Nitrogen), Nitrite (measured as Nitrogen – human health impact, ecosystems impact)

(2.5.1.3) Value chain stage

Select all that apply

- Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Industrial and chemical accidents prevention, preparedness, and response
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements

(2.5.1.5) Please explain

Flex identifies and classifies nitrates in our water supply, wastewater, and stormwater. If levels are detected, pollutants are dealt with in compliance with internal and legal standards.

Row 3

(2.5.1.1) Water pollutant category

Select from:

- Pathogens

(2.5.1.2) Description of water pollutant and potential impacts

Total Coliforms (including fecal coliform and E. Coli), Turbidity – human health impact, ecosystems impact

(2.5.1.3) Value chain stage

Select all that apply

- Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Industrial and chemical accidents prevention, preparedness, and response
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements

(2.5.1.5) Please explain

Flex identifies and classifies pathogens in our water supply, wastewater, and stormwater. If levels are detected, pollutants are dealt with in compliance with internal and legal standards.

Row 4

(2.5.1.1) Water pollutant category

Select from:

- Other synthetic organic compounds

(2.5.1.2) Description of water pollutant and potential impacts

Chlorine (as Cl₂) – human health impact, ecosystems impact

(2.5.1.3) Value chain stage

Select all that apply

- Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Industrial and chemical accidents prevention, preparedness, and response
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements

(2.5.1.5) Please explain

Flex identifies and classifies chlorine in our water supply, wastewater, and stormwater. If levels are detected, pollutants are dealt with in compliance with internal and legal standards

Row 5

(2.5.1.1) Water pollutant category

Select from:

- Oil

(2.5.1.2) Description of water pollutant and potential impacts

Oil and grease – ecosystems impact

(2.5.1.3) Value chain stage

Select all that apply

- Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Industrial and chemical accidents prevention, preparedness, and response
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements

(2.5.1.5) Please explain

Flex identifies and classifies oil in our water supply, wastewater, and stormwater. If levels are detected, pollutants are dealt with in compliance with internal and legal standards.

Row 6

(2.5.1.1) Water pollutant category

Select from:

- Other physical pollutants

(2.5.1.2) Description of water pollutant and potential impacts

(2.5.1.3) Value chain stage

Select all that apply

- Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Industrial and chemical accidents prevention, preparedness, and response
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements

(2.5.1.5) Please explain

Flex identifies and classifies suspended solids in our water supply, wastewater, and stormwater. If levels are detected, pollutants are dealt with in compliance with internal and legal standards.

[Add row]

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

	Environmental risks identified
Climate change	<i>Select from:</i> <input checked="" type="checkbox"/> Yes, both in direct operations and upstream/downstream value chain
Water	<i>Select from:</i> <input checked="" type="checkbox"/> Yes, both in direct operations and upstream/downstream value chain

[Fixed row]

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

- United States of America

(3.1.1.9) Organization-specific description of risk

There is increasing concern that a gradual increase in global average temperatures due to increased concentration of emissions will cause significant changes in weather patterns and an increase in the frequency and severity of natural disasters, which could impair our production capabilities, disrupt the operation of our supply chain, and impact our customers and their demand for our services. As a global electronics contract manufacturer, these laws and regulations have, and will continue to have, the potential to impact on our operations directly or indirectly as a result of required compliance by us and our suppliers. We may experience increases in energy, production, transportation and raw material costs, capital expenditures and insurance premiums and deductibles. In consistency of legislation and regulations among jurisdictions may also affect the cost of compliance with such laws and regulations, which could impact our business operations and financial results. Our failure to comply with environmental laws and regulations could limit our ability to expand our facilities or could require us to incur significant operating expenses, as well as reputational risk. To ensure business continuity in the face of new climate-related policy development, we are closely monitoring and following current and emerging global carbon emissions trading, carbon taxes, renewable tariffs, and air pollution standards, specifically in California, China, UK, and the EU.

(3.1.1.11) Primary financial effect of the risk

Select from:

Virtually certain

(3.1.1.14) Magnitude

Select from:

Low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Less than 0.5% of total revenue

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

(3.1.1.19) Anticipated financial effect figure in the short-term – minimum (currency)

15000000

(3.1.1.20) Anticipated financial effect figure in the short-term – maximum (currency)

25000000

(3.1.1.25) Explanation of financial effect figure

Financial impacts can include increased operating costs associated with reporting, disclosure, environmental compliance and management (e.g., taxes, purchase levies, or management costs such as consulting and IT fees). We could also incur costs associated with altering our manufacturing and operations in order to comply with environmental regulations. In addition, our failure to comply with environmental laws and regulations could also limit our ability to expand our facilities. While it is difficult to accurately quantify the financial implications, we estimate potential increased operating costs related to shifting policy and legislation to range from 15M to 25M annually which is our definition for 'substantive' for CDP reporting purposes. This potential financial impact figure is calculated based on a three to five penny per share negative impact (i.e., any event that impacts our earnings up to five million USD) and an assessment by subject matter experts in Finance.

(3.1.1.26) Primary response to risk

Policies and plans

- Amend the Business Continuity Plan

(3.1.1.27) Cost of response to risk

0

(3.1.1.28) Explanation of cost calculation

We have developed rigorous risk mitigation environmental compliance programs designed to meet applicable regulations. Our operations are subject to laws governing the discharge of pollutants into the air and water, the management and disposal of hazardous substances and wastes, and the cleanup of contaminated sites. All global sites are required to adopt and implement our social and environmental management system, to methodically identify, address, mitigate and control site-level risks. All sites are audited against our social and environmental audit protocol, including climate-related controls. We have implemented processes and procedures to ensure that our operations comply with all applicable environmental regulations, and we have developed compliance programs designed to meet the needs of our customers as well as the regulations. The incremental cost of responding to emerging regulatory risks is zero, since managing policy and legal risks falls within the normal course of business

(3.1.1.29) Description of response

We have developed rigorous risk mitigation environmental compliance programs designed to meet applicable regulations. Our Sustainability lead monitors worldwide climate change regulatory activity. The Sustainability lead, regularly engage in dialogue with industry workgroups, trade associations, and other forums as part of our process for identifying relevant emerging regulatory requirements and risks. For example, we are evaluating potential impacts from carbon taxation proposals in the US that could have broader application and emissions trading schemes in California, China, UK and the EU. However, our operations are subject to laws governing the discharge of pollutants into the air and water, the management and disposal of hazardous substances and wastes, and the cleanup of contaminated sites. Our Sustainability and Facilities/EHS teams actively collaborate to assess risks at the site level in all locations where we operate. All global sites are required to adopt and implement our social and environmental management system. All sites are audited against our social and environmental audit protocol. We have implemented processes and procedures to ensure that our operations comply with all applicable environmental regulations, and we have developed compliance programs designed to meet the needs of our customers as well as the regulations. We performed a quantitative physical and qualitative transition climate change scenario analysis, within which we considered physical risks in addition to regulatory, technology, market, and reputational transition risks. The scenario analysis suggests that efforts to reduce our carbon footprint, increase energy efficiency, and develop low carbon products and services have positioned us well to minimize risks and maximize opportunities from the low-carbon transition, reducing our exposure to future emission regulation.

(3.1.1.9) Organization-specific description of risk

We may be adversely affected by shortages of required electronic components. We have experienced shortages of raw materials and electronic components. These shortages may be caused by events outside our control, including, but not limited to, natural or environmental occurrences such as severe storms or floods which impact our supply chain or inventory. Unanticipated component shortages could result in curtailed production or delays in production, which may prevent us from making scheduled shipments to customers. Our site in Chennai, India, which hosts a major manufacturing facility and the Global Business Services Center supporting our internal activities for IT and Finance, has been experiencing severe storms and flooding events. In 2015, storm and flooding in Chennai affected our power supply and our operations had to rely on limited fuel availability provided by onsite generators. The site also experienced delays in shipments, as roads were flooded and had to be cleared up first. Our inability to make scheduled shipments could cause us to experience a reduction in sales, an increase in inventory levels and costs, and could adversely affect relationships with customers. Component shortages may also increase our cost of goods sold because we may be required to pay higher

prices for components in short supply and redesign or reconfigure products to accommodate substitute components. As a result, component shortages could adversely affect our operating results.

(3.1.1.11) Primary financial effect of the risk

Select from:

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

- Yes

(3.1.1.19) Anticipated financial effect figure in the short-term – minimum (currency)

15000000

(3.1.1.20) Anticipated financial effect figure in the short-term – maximum (currency)

25000000

(3.1.1.25) Explanation of financial effect figure

Financial impacts can include inventory damage, lost revenue from curtailed production or delays in production, increased cost of raw materials or components, increased costs related to redesign or reconfiguration of products to accommodate substitute components, and increased insurance premiums. While it is difficult to accurately quantify the financial implications, we estimate potential incremental costs from physical risks impacting our supply chain to range from 15M to 25M annually which is our definition for 'substantive' for CDP reporting purposes. We define a substantive financial impact as one that could create a 15M to 25M charge to our statement of operations, resulting in three to five pennies per share negative impact. We estimate our financial impact using a quantifiable indicator of a one penny loss in earnings per share for every five million USD loss in our earnings, meaning that any event that hits our revenue up to five million USD would result in a loss of one penny per share. This estimate is based on an assessment by subject matter experts in Finance. We maintain insurance that mitigates the high end of financial impacts.

(3.1.1.26) Primary response to risk

Compliance, monitoring and targets

Greater due diligence

(3.1.1.27) Cost of response to risk

0

(3.1.1.28) Explanation of cost calculation

Managing risks in our supply chain falls within the normal course of business and incurs zero incremental costs.

(3.1.1.29) Description of response

We have developed rigorous risk mitigating compliance programs which include collecting compliance data from our suppliers, full laboratory testing and public reporting of environmental metrics. We convey our requirements to suppliers through due diligence assessments, on-site audits, and social and environmental trainings. In 2024, we performed 135 initial audits and 71 follow-up audits focused on suppliers located in high-risk regions, including areas in Asia, Europe, and South America. We have developed a Preferred Supplier Program (PSP) and work with key suppliers to identify, assess, and manage risks and ensure compliance

with social and environmental standards that exceed RBA's. In 2022, there were 473 suppliers in our PSP, of which 68% have been assessed via our Self-Assessment Questionnaire (SAQ). Flex's SAQ contains questions related to measurement, monitoring and existence of systems to reduce impacts from water use, discharge, air emissions, energy use, waste, and hazardous materials. Supplier training also provides a critical opportunity for us to strengthen our relationship with suppliers. In 2024, we trained 419 suppliers and 637 supplier personnel on topics such as Flex's sustainability expectations, sustainability management best practices, supply chain social and environmental management programs, and compliance with the RBA code of conduct review and guidelines. We selected these suppliers because they were (1) local to our campus, (2) represented a diverse cross-section of our supplier base, or (3) were labor agency suppliers. Through direct engagement with our suppliers, we can also mitigate potential risks such as those related to component shortages caused by severe storms or flooding. We are able to manage and mitigate financial impacts from component shortages by increasing our cost of goods sold as well by diversifying our supply base and developing redundant capabilities by promoting greater due diligence among suppliers.

(3.1.1.9) Organization-specific description of risk

Climate related hazards could have a material adverse impact on our direct operations and financial results across our network of design, engineering, manufacturing, and logistics facilities across 30 countries. Increased frequency, intensity, and duration of extreme weather conditions could impair our production capabilities and disrupt the operation of our supply chain, and impact our customers and their demand for our services. Flex performed quantitative physical and qualitative transition climate change scenario analysis. We evaluated present and future exposure to acute and chronic hazards from temperature and precipitation changes, flooding, drought, tropical cyclones, water stress and wildfire. Such events could make it difficult or impossible to manufacture or deliver products to our customers, receive production materials from our suppliers, or perform critical functions, which could adversely affect our revenue and require significant recovery time and expenditures to resume operations. We could experience interruptions indirectly, as a result of service interruption from utilities, transportation or telecommunications providers, as well as directly, as a result of disrupted manufacturing operations. Reduced production due to business interruption can affect our ability to deliver products to our customers, or perform critical business functions, which could adversely affect our revenue and require significant recovery time and expenditures to resume operations.

(3.1.1.20) Anticipated financial effect figure in the short-term – maximum (currency)

25000000

(3.1.1.25) Explanation of financial effect figure

Financial impacts can include potential closure of operations, facility repair costs, lost work time, increased utility costs, lost revenue, damaged equipment, lost inventory, and increased insurance premiums. The financial impact is expected to range between 15M and 25M, which is our typical insurance deductible. It is consistent with our threshold for substantive financial impact noted in 2.4 and defined as once that could create up to 25M charge to our statement of operations, resulting in three to five pennies per share negative impact. This estimated financial impact is calculated on an assessment by subject matter experts in Finance. The company maintains insurance that mitigates the high end of financial impacts.

(3.1.1.26) Primary response to risk

Policies and plans

Amend the Business Continuity Plan

(3.1.1.27) Cost of response to risk

0

(3.1.1.28) Explanation of cost calculation

We maintain business recovery plans that are intended to allow us to recover from natural disasters or other events that can be disruptive to our business, we maintain a program of insurance coverage for a variety of property, casualty, and other risks. As we adjust our strategy to address risks, we naturally incorporate

those strategies into our spending. Flex is regularly evaluating the adaptive capacity of a subset of business-critical sites to the hazards identified within business impact analysis in order to determine each site's actual vulnerability to key modeled climate hazards. Our findings suggest that our facilities have a well-established capacity to manage present-day weather impacts and are developing the capacity to build resilience to future climate change hazards. The incremental cost of responding to acute physical risks is zero, since managing physical risks in our operations falls within the normal course of business.

(3.1.1.29) Description of response

While we maintain business recovery plans that are intended to allow us to recover from natural disasters or other events that can be disruptive to our business, some of our systems are not fully redundant, and we cannot be sure that our plans will fully protect us from all such disruptions. We maintain a program of insurance coverage for a variety of property, casualty, and other risks. Losses not covered by insurance may be large, which could harm the results of our operations and financial condition. After Typhoon Hato impacted our Zhuhai China factory in 2017, we compiled lessons learned and developed mitigating steps to reduce potential facility impacts and keep employees safe during future storms. This included establishing a center of command and emergency response team; inspecting and reinforcing facilities, water tanks and back-up power sources; developing recovery plans with key suppliers to reduce down time; and minimizing activities during storms, sending employees home, and stock piling food and water inside buildings for those unable to go home. Capital and expense planning are parts of our normal budgetary cycle. As we adjust our strategy to address risks, we naturally incorporate those strategies into our spending, e.g., by adding features to new facilities, upgrading and/or repairing current facilities, disaster planning, etc. Flex is regularly evaluating the adaptive capacity of a subset of business-critical sites to the hazards identified within business impact analysis in order to determine each site's actual vulnerability to key modeled climate hazards. Our findings suggest that our facilities have a well-established capacity to manage present-day weather impacts and are developing the capacity to build resilience to future climate change hazards. We continue to integrate climate resilience into our business strategy to enhance business resilience.

(3.1.1.9) Organization-specific description of risk

Due to increased exposure to extreme weather events influenced by climate change, such as severe storms or floods including heavy precipitation and cyclone events, we may experience adverse impacts in our supply chain or inventory, resulting in shortages of raw materials and required electronic components. From time to time, we have experienced shortages of some of the electronic components that we use. Shortages can result from extreme weather events such as cyclones, hurricanes, and typhoons and can cause us to experience a reduction in sales, increase in inventory levels and costs, and could adversely affect relationships with existing and prospective customers. Given the complexity of our supply chain and our geographically dispersed operations, we also depend on a variety of common carriers to transport our materials from our suppliers to us, and to transport our products from us to our customers. Unanticipated component shortages could result in curtailed production or delays in production, which may prevent us from making scheduled shipments to customers. No instances of extreme weather events were observed in 2024 that disrupted our upstream operations, however, in 2018, we experienced a severe cyclone in Chennai, India, which damaged air freight cargo in transit. Our inability to make scheduled shipments could cause us to experience a reduction in sales, an increase in inventory levels and costs. Component shortages may also increase our cost of goods sold.

(3.1.1.27) Cost of response to risk

(3.1.1.28) Explanation of cost calculation

To manage financial impacts from potential shortages of raw materials and electronic components, we aim to diversify our supply base and develop redundant capabilities. We have a Preferred Supplier Program and work with key suppliers to identify, assess, and manage risks, ensure compliance with social and environmental standards that meet and exceed RBA's code of conduct, and maintain a high performance within our suppliers. In 2024, we performed 135 initial audits, and 71 follow-up audits focused on suppliers located in high-risk regions, including parts of Asia, Europe, and South America and 637 supplier personnel, have been trained on the Flex and RBA social and environmental standards. It is difficult to accurately quantify the incremental cost of responding to emerging acute physical risks is zero since managing risks in our supply chain falls within the normal course of business.

(3.1.1.29) Description of response

We have developed rigorous risk mitigation compliance programs which include collecting compliance data from our suppliers, full laboratory testing and public reporting of environmental metrics such as GHG emissions, energy, and water. To manage financial impacts from potential shortages of raw materials and electronic components, we aim to diversify our supply base and develop redundant capabilities. We have developed a Preferred Supplier Program (PSP) and work with key suppliers to identify, assess, and manage risks, ensure compliance with social and environmental standards that meet and exceed RBA's code of conduct, and maintain a high performance within our suppliers. Through supplier training sessions, onsite audits, screenings, and SAQs, we ensure the continuity and effectiveness of supplier social and environmental activities. In 2022, as the COVID-19 pandemic continued to restrict global travel, we still utilized remote supplier audits where necessary. In 2024, we performed 135 initial audits and 71 follow-up audits focused on suppliers located in high-risk regions, including parts of Asia, Europe, and South America and 637 supplier personnel, have been trained on the Flex and RBA social and environmental standards and on topics such as Flex's sustainability expectations, sustainability management best practices, supply chain social and environmental management programs, and compliance with the RBA code of conduct review and guidelines. Additionally, in 2022, we expanded our supplier training efforts to reach 680 suppliers and 1,567 supplier personnel. Through direct engagement with our suppliers, we can also mitigate potential risks such as those related to component shortages caused by severe storms or flooding.

(3.1.1.9) Organization-specific description of risk

Company specific details about how the impact identified affects our direct operations: Climate related hazards and acute shocks associated with cyclones and floods could have a material adverse impact on our direct operations and financial results across our extensive network of Flex-specific design, engineering, manufacturing, and logistics facilities located across 30 countries. We could experience business interruptions indirectly, as a result of service interruption from utilities, transportation or telecommunications providers, as well as directly, as a result of disrupted manufacturing operations. Reduced production due to business interruption can affect our ability to timely deliver products to our customers, or perform critical business functions, which could adversely affect our revenue and require significant recovery time and expenditures to resume operations. The most recent storm that significantly affected our business took place in August 2017. Our factory in Zhuhai, China, was exposed to a storm surge associated with Typhoon Hato that caused severe flooding and wind gusts that reached 150 mph. As a result, 10M in losses were incurred at our Zhuhai factory, including business interruption for both shipments and supplies, as well as physical damage to our facilities. As one of our largest manufacturing facilities measuring over 4M square feet, our Zhuhai factory is critical to operations.

(3.5.2.10) Comment

Shenzhen Gushu: 121.14 MTCO_{2e} verified scope 1 emissions; 23,261 MTCO_{2e} verified location-based scope 2. FuYong Shenzhen: 67.14 MTCO_{2e} verified Scope 1 emissions; 15,132 MTCO_{2e} verified location-based scope 2. The Carbon Emission Factors is calculated by government for ETS.

[Fixed row]

(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

Flex Shenzhen is strategically located in a city which is also known as “Silicon Valley” of China and the pioneer city of China’s economy. i. Strategy for complying: Flex’s strategy for complying with the Shenzhen pilot Emissions Trading Scheme (ETS) is to stay under the cap by implementing energy efficiency measures in operations and optimizing production processes at the sites covered by this ETS. We measure and monitor our emissions to ensure that we have not exceeded regulatory limits. We continuously measure and monitor our emissions to ensure that we have not exceeded the set emissions limit while, at the same time, implementing continuous energy saving kaizen, energy efficiency techniques. In the past year we have implemented the following initiatives: (1) Common area power optimization, replace low efficiency transformer, centralized water heater at dormitory and centralized the office at our GuShu facility (2) implemented energy saving transformations of air-conditioning terminal outlets, production line power distribution system, intelligent transformation of production line lighting system, and exhaust system terminal outlets in our FuYong facility. In 2024 Shenzhen environmental integrity enterprise declaration was approved at FuYong site, which means carrying out voluntary cleaner production, promoting energy conservation and emission reduction, and passing Shenzhen’s voluntary cleaner production review. Under this short-term strategy, Flex has remained compliant with the Shenzhen pilot ETS since 2013 and greatly reduced its energy consumption and emissions output.

(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

	Environmental opportunities identified
Climate change	<i>Select from:</i> <input checked="" type="checkbox"/> Yes, we have identified opportunities, and some/all are being realized
Water	<i>Select from:</i> <input checked="" type="checkbox"/> Yes, we have identified opportunities, and some/all are being realized

[Fixed row]

(3.6.1) Provide details of the environmental opportunities identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

- Mexico

(3.6.1.8) Organization specific description

We are exploring different opportunities to save electricity on our sites. This includes energy efficiency in buildings and energy efficiency in production processes. The opportunities include automation of air conditioning systems, re-layout of lighting system, fitting lighting systems with sensors and automation, SMART energy management systems, replacement of facilities equipment with energy efficient one and replacement of outdated equipment with modern efficient versions. This is a continuous process with checking and upgrading the engineering systems of our buildings, which brings not only electricity savings and subsequent reduction of GHG emissions, but also monetary savings.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

- Reduced indirect (operating) costs

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

- Short-term

(3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Flex is not able to define the anticipated effect of the opportunity on the financial position, financial performance, and cash flows at this time

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

Yes

(3.6.1.17) Anticipated financial effect figure in the short-term - minimum (currency)

1500000

(3.6.1.18) Anticipated financial effect figure in the short-term – maximum (currency)

2000000

(3.6.1.23) Explanation of financial effect figures

Cost savings from the energy efficiency projects are calculated based on the energy savings generated multiplied by the cost of energy which would be spent in case the project wouldn't have been implemented. Energy savings are calculated with the 12-months effect, after which the state is considered as normal operation.

(3.6.1.24) Cost to realize opportunity

13000000

(3.6.1.25) Explanation of cost calculation

Cost of equipment and installation for energy saving projects

(3.6.1.26) Strategy to realize opportunity

Flex facilities are focused on saving energy. There are quarterly reviews to define opportunities. Energy saving projects are recorded into CenterPoint platform, where they are approved, then monitored through all stages of project implementation. If the opportunity failed at one of our sites, it can be used by the other and be efficiently implemented. Due to different circumstances, opportunities have different results on each specific site.

Mexico

(3.6.1.8) Organization specific description

We have committed to reducing water withdrawals by 5% per revenue, focusing on sites located in water scarce areas, by 2025. This opportunity is considered strategic for the company because our aim is to improve water efficiency in global operations, reduce operating expenses, increase brand value, and further engage employees in sustainability efforts. Our water management strategy to realize water efficiency in operations incorporates water monitoring. We track, analyze, and manage the impact of our water use at each of our sites, which helps us strategize our mitigation efforts in locations where water resources might be limited or strained. Leveraging an internal water database allows us to review and manage water projects through a financial and strategic context. The database enables us to review the required investment, estimate annual water savings, calculate project time and duration, and track the status of the project through completion. To share best practices at the global level, all users of the platform can view projects at other sites and their owners to evaluate the feasibility of the project for their facilities and connect with other project managers to share best practices. In 2024, 16 water saving projects from 9 sites were recorded in a water savings project tracker, with 14 reaching the completion stage. Water savings from projects reported in this database are estimated to be approximately 30,000 cubic meters.

(3.6.1.8) Organization specific description

We have an opportunity to optimize our production cost in a medium-term window by reducing exposure to future energy price increases due to rising demand for renewable energy, by increasing our renewable energy purchases in the short term. This opportunity is driven, in part, by our key customers, who are increasingly setting supply chain targets and requesting that we improve our energy performance and increase RE purchases to power our facilities. Approximately 88% of our scope 1 and 2 GHG emissions results from electricity purchases at our operated locations. We see this as an opportunity to reduce operating costs and exposure to GHG emissions by increasing our RE purchases, enhancing our reputation, improving the resiliency of our operations and further developing relationships with key customers. In 2024, Flex increased its onsite photovoltaic solar farm capacity to 40.71 MW, resulting in a reduction of over 15,000 tons of CO₂e. We have actively investing in green power purchases in other regions, sometimes aided by our customers, and we plan to factor procurement into our next set of company-wide goals. We are looking for opportunities in all the locations where our footprint is substantial. In some locations, the green energy market is less developed, but we expect that to change rapidly over the next several years. We also have an opportunity to increase the efficiency of production and distribution processes at our owned and operated manufacturing locations.

(3.6.1.20) Anticipated financial effect figure in the medium-term - maximum (currency)

300000

(3.6.1.23) Explanation of financial effect figures

Cost-savings achieved through implementation of energy efficiency initiatives and low-carbon energy installations in 2024 was 12 million. This was calculated based on the actual and estimated savings of implemented energy efficiency initiatives and low-carbon energy installations in 2024. Example 2024 energy efficiency projects include upgrades to HVAC, BEMS, lighting, biogas, waste reduction, Solar PV, insulation, Production power management saving initiatives and more.

(3.6.1.24) Cost to realize opportunity

17000000

(3.6.1.25) Explanation of cost calculation

Implementation of energy efficiency initiatives

(3.6.1.26) Strategy to realize opportunity

Flex's energy management strategy involves the development and implementation of energy reduction best practices, on-site energy generation through solar panels, buying energy from renewable sources, and replacing and installing LED light fixtures. We are working towards our meeting or goal to halve our Scope 1 and 2 emissions by 2030, from a 2019 baseline. We strive to reduce the climate impacts of the energy our operations consume and turn to renewable energy sources. In CY24 we decreased emissions 43 percent from our baseline year. We leverage renewable energy sources, where possible. Our facilities will support our progress in renewable energy production reduce emissions and instill resilience along our value chain. To continue these achievements beyond energy, in 2022, we committed to reducing water withdrawn by 5% per revenue, focusing on sites located in water scarce areas, by 2025. We are also working closely with customers who have set supply chain targets. 2024 monetary investments related to energy efficiency initiatives and low-carbon energy installations were ~17M with no additional costs beyond management and operation. In 2024, we avoided more than 40k metric tons of CO₂e emissions through our energy efficient projects. In 2024, Flex increased its onsite photovoltaic solar farm capacity to 40.71 MW, resulting in a reduction of over 15,000 tons of CO₂e.

(3.6.1.8) Organization specific description

Integral to our environmental stewardship efforts is the responsible and sustainable management of our world's water resources. Though our operations are not water intensive, we can still advance environmental initiatives. Recognizing the growing threat that water scarcity due to climate change impacts poses to the local communities our facilities are sited in, in 2020, we committed to reducing our water withdrawn per revenue by 5%, focusing on sites located in water scarce areas by 2025. Our water strategy relies on decreasing use, recycling in our more intensive uses and installing collection systems for rainwater to meet demands. This opportunity is considered strategic for the company because it builds on previous commitments to improve water efficiency in global operations, reduce operating expenses, increase brand value, and further engage employees in sustainability efforts, while also increasing our resilience to climate change. We recognize the scarcity of water around the world and utilize water management practices that help reduce our use. Strategies to realize this opportunity: 1) Collect water use from each site, 2) Identify how sites are reducing water use, including a baseline of water use and annual reduction plan, 3) Share best practices and track improvements, 4) Propose new practices and improvement efforts once major water use processes are identified.

- Monitoring compliance with corporate policies and/or commitments
- Overseeing and guiding the development of a business strategy
- Overseeing and guiding major capital expenditures
- Approving and/or overseeing employee incentives

(4.1.2.7) Please explain

The Nominating, Governance and Public Responsibility Committee of our Board of Directors assists in fulfilling oversight of sustainability, including environmental, social, and corporate governance affairs. This includes the responsibility to oversee climate-related sustainability risks and opportunities, including: (1) review and revise, as necessary, the Company's corporate governance procedures and policies, (2) review the Company's corporate sustainability policies and programs, (3) review and assess current and emerging sustainability, including environmental, social, and corporate governance issues, trends, regulatory developments, and best practices. The Board of Directors conducts an annual strategic sustainability review in which climate-related risks and opportunities are highlighted. At the operational level, our greenhouse gas (GHG) inventory and reduction program is overseen by an Executive Leadership Team (ELT) comprised of the Chief Financial Officer, Chief Human Resources Officer, General Counsel, Operations President, Chief of Strategy, the President of Operations, Excellence and Transformation, and Head of Global Sustainability. The Sustainability Program Management Officer (PMO) has been designated to lead the ELT and coordinates all related meetings, agreements, negotiations, and tasks. The ELT is responsible for prioritizing climate-related risks and opportunities and highlighting them to the appropriate business functions. Progress towards our GHG reduction goal is reviewed regularly by the ELT and periodically with the CFO and the Executive Committee. Flex's corporate sustainability leadership committee holds quarterly meetings and conducts sustainability scorecard reviews to assess progress on key sustainability indicators and targets by program, region and site. In addition, the team conducts periodic reviews of key issue areas, including key performance indicators, e.g., environmental, health and safety are reviewed quarterly with senior management and every month with the Sustainability site leaders.

(4.1.2.7) Please explain

The Nominating and Governance Committee of our board of directors assists in fulfilling oversight of sustainability, including environmental, social, and corporate affairs that may have a significant impact on the financial statements and related company compliance policies and programs. This includes the responsibility to assess water-related sustainability risks and opportunities, including: (1) review and revision of the corporate governance procedures and policies, (2) review of the sustainability policies and programs, (3) review and assessment of current and emerging sustainability, including environmental, social, and corporate governance issues, trends, regulatory developments, and best practices. The responsibility also includes reviewing, monitoring and guiding the company-wide business strategy, including major plans of action, acquisitions & divestitures and major capital expenditures. These are examples of the governance mechanisms into which water-related issues are integrated. The board of directors conducts an annual strategic sustainability review in which water-related risks and opportunities are highlighted and directional initiatives are approved, e.g., commitment to reduce water withdrawn by 5%, focusing on sites located in water scarce areas, by 2025. At the operational level, our water-related initiatives and activities are overseen by an Executive Leadership Team (ELT) comprised of the Chief Financial Officer, Chief Human Resources Officer, General Counsel, Operations President, VP of Strategy, The President of Operation, Excellence and Transformation and Head of Global

Sustainability. The ELT is responsible for prioritizing water-related risks and opportunities and highlighting them to the appropriate business functions. Another example of how monitoring implementation and performance is integrated is that the progress towards our water reduction goal is reviewed regularly by the ELT and periodically with the CFO and the Executive Committee. Flex's corporate sustainability leadership committee holds quarterly meetings and conducts sustainability scorecard reviews to assess progress on key sustainability indicators and targets by program, region and site. In addition, the team conducts periodic reviews of key issue areas, including key performance indicators, e.g., environmental, health and safety are reviewed quarterly with senior management.

These policies and programs also address human rights, climate change, and risk mitigation. At the strategic level, the Executive Leadership Team (ELT) is the highest management level committee responsible for climate-related issues. The ELT is a cross-functional group of senior executives comprised of the Chief Executive Officer, Chief Financial Officer, Chief Human Resources Officer, Executive Vice President, General Counsel, and Chief Procurement and Supply Chain Officer, Chief Strategy Officer, the President of WW Operations, Chief Procurement & Supply Chain Officer, a President of Operations, Excellence, and Transformation, Communications and Sustainability and Head of Global Sustainability. The ELT oversees strategic climate issues and reduction program and reports directly to the CEO. The ELT provides guidance and direction on the integration of sustainability programs, including climate-related matters, across all aspects of our business. In the spirit of collaborating to advance our shared climate action agenda, our CEO joined the World Economic Forum's Alliance of CEO Climate Leaders, a global community focused on driving action across all sectors and engaging policymakers

(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?

Climate change

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

Yes

(4.5.2) % of total C-suite and board-level monetary incentives linked to the management of this environmental issue

10

(4.5.3) Please explain

To ensure accountability of climate related issues and progress, in fiscal year 2023, a Sustainability component was incorporated into the incentive bonus plan for executive officers and other members of our senior management. The Sustainability component is based on five quantitative Sustainability metrics tied to four sustainability pillars (pillars: environment, labor, health and safety). The metric for the environment pillar is achieving our absolute scope 1 and 2 greenhouse gas (GHG) emissions reduction target. The Sustainability component is included in the fiscal year 2024 incentive bonus plan as well, representing one of three components included in the final bonus payout.

10

(4.5.3) Please explain

To ensure accountability of water related issues and progress, in fiscal year 2023, a Sustainability component was incorporated into the incentive bonus plan for executive officers and other members of our senior management. The Sustainability component is based on five quantitative sustainability metrics tied to four sustainability pillars (pillars: environment, labor, health and safety). The metric for the labor pillar is based on the level of achievement with regard to certifying our manufacturing sites as a Responsible Business Alliance (RBA) factory of choice by a specified date, which requires a water management program that documents, characterizes, and monitors water sources, use and discharge; seeks opportunities to conserve water; and controls channels of contamination. The Sustainability component is included in the fiscal year 2024 incentive bonus plan as well, representing one of three components included in the final bonus payout.

(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?

(4.11.1) External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the environment

Select all that apply

Yes, we engaged indirectly through, and/or provided financial or in-kind support to a trade association or other intermediary organization or individual whose activities could influence policy, law, or regulation

(4.11.2) Indicate whether your organization has a public commitment or position statement to conduct your engagement activities in line with global environmental treaties or policy goals

Select from:

Yes, we have a public commitment or position statement in line with global environmental treaties or policy goals

(4.11.3) Global environmental treaties or policy goals in line with public commitment or position statement

Select all that apply

Paris Agreement

Sustainable Development Goal 6 on Clean Water and Sanitation

(4.11.5) Indicate whether your organization is registered on a transparency register

Select from:

No

(4.11.8) Describe the process your organization has in place to ensure that your external engagement activities are consistent with your environmental commitments and/or transition plan

Flex has strong environmental commitments to its stakeholders including customers, investors and employees. As such, Flex hopes to bring a unique and important perspective to bear on policy issues that impact the economy and the environment and, we try to improve business and living conditions in the area. As per our Code of Business Conduct and Ethics, we do not make contributions to and spending for political campaigns, political organizations, lobbyists or lobbying organizations. We are members of many trade organizations across the various areas of our business. Our participation in these organizations is to understand various regulations and to drive compliance across Flex, not to influence policies. We have implemented processes to ensure direct and indirect activities that influence policy are consistent with our overall climate change strategy: our Sustainability Regional Leads (RLs) and Corporate Real Estate and Facilities (CREF) Regional Leads (RLs) report any pertinent activity in their regions to CREF Senior Vice President (VP) and the Head of Global Sustainability on a regular basis. The RLs provide communication links between sites and corporate, ensuring site-level activity is aligned to our corporate strategy. The Head of Global Sustainability and the CREF VP provide leadership and resources to drive global climate-related activities. We joined Ellen MacArthur Foundation to accelerate the transition to a circular economy. Through this active participation, we ensure our external engagements are consistent with our company strategy, including our climate change strategy.

[Fixed row]

The Silicon Valley Leadership Group (SVLG) aims to develop, promote, pass, and implement policy initiatives in the tech industry that benefit our members and their employees. According to the SVLG website: "The Climate and Energy Policy team is focused on supporting policies and legislation that encourages the development of solutions to environmental challenges. Our top policy priorities are the climate crisis; water supply reliability, infrastructure improvement, and reliable, high-quality, environmentally responsible and competitively-priced energy." SVLG supports a range of climate-related legislation including, but not limited to, the CA Electric Vehicle Charging Stations and Rental Property Bill (AB 1796), the Clean Truck Act (AB 2061), the Zero-Emissions Buildings (AB 3232), etc.

From the Business RoundTable's (BRT) website, BRT "supports policies that build on America's strengths in technology and energy diversity, encourage investment and innovation in our nation's vibrant energy sector, and preserve environmental quality for the 21st century and beyond." BRT states that "Through a strong commitment to environmental sustainability, a focus on renewing America's energy infrastructure for both traditional and renewable resources, and support for regulations that balance environmental and economic needs, Business Roundtable is dedicated to unlocking our nation's energy potential in a manner that benefits all Americans. Elevating energy efficiency and environmental responsibility is not only good for the planet, it's good for business and our nation's economy." "For over a decade, Business Roundtable CEOs have been a leading voice in the business community on sustainability. However, policymakers and the public are often still unaware that large U.S. companies have implemented environmentally sustainable practices across their businesses, directly contributing to positive environmental and economic outcomes. The Business Roundtable has launched a public campaign to foster greater awareness of our members' contribution to sustainability. U.S.

businesses are making a positive impact toward sustainable outcomes, which can be seen across major trends such as: • Driving Efficiency, Reuse, and Recycling • Advancing Renewable Energy • Reducing Carbon Emissions • Growing Sustainable Investment

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Flex performed a TCFD-aligned, qualitative scenario analysis to identify potential risks and business opportunities arising from the transition towards a low carbon economy. The transition scenario analysis relied on the assumptions and outputs of climate policy scenarios developed by the International Energy Agency (IEA) and the Network for the Greening of the Financial System (NGFS). The scenarios explore different possible climate futures and map out the consequences of different choices for energy use and energy policies. We used the IEA's Sustainable Development Scenario (SDS) and Stated Policies Scenario (STEPS) to evaluate a wide range of future outcomes. SDS is Paris-aligned "well below 2C" pathway that reaches global net zero emissions by 2070, while STEPS reflects current policy settings as well as specific policy initiatives that are under development. By 2100, global warming exceeds 2.5C in the STEPS. Our analysis also considered the NGFS Delayed Transition scenario. The Delayed Transition Scenario assumes policy reaction to climate change is delayed until 2030, followed by an abrupt and rapid implementation of very strong climate policies. In this scenario the energy transition and technology changes proceed slowly and GHG emissions rise until 2030. After 2030, emissions fall rapidly and reach net zero CO2 emissions by 2050. This scenario produces a warming of 1.8 C by 2100. Our scenario analysis considered 2030 and 2040 time horizons. The 2030 time horizon aligns with our GHG emission reduction targets and 2040 is a long-term horizon that allowed analysis of the impacts of the abrupt transition that occurs in 2030 in the NGFS Delayed Transition Scenario. While the company-wide transition assessment considered Flex as a whole together with its value chain, the assessment also included a more detailed evaluation of transition risks and opportunities for Flex operations in the U.S., Mexico, China, India, Malaysia, Israel, Brazil and Hungary. These countries were selected for additional, detailed review based on the geographic distribution of Flex's 2021 sales and key stakeholder input on the importance of each country to Flex's business. For each country, Flex evaluated 2030 and 2040 risks from policy and legal, technology, market and reputational risks as well as opportunities from resource efficiency, energy sourcing, new markets, and resilience.

Climate change (one of five drivers of nature change)

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

The WRI Aqueduct tool provides insights into overall water risk for an organization, physical risks such as baseline water stress, water depletion, flooding and drought risk, etc., and regulatory and reputational risks as well. The Aqueduct Risk Filter plots and assesses current and future risks across locations based on submitted facility location and water usage data. The tool defines baseline water stress as the ratio of total water withdrawals to available renewable surface and ground water supplies. By assessing overall water risk, the tool considers quantity-based physical risks (coastal flood risk, drought risk, groundwater table decline, etc.), quality-related physical risks (untreated connected wastewater and coastal eutrophication potential), regulatory and reputational risk (unimproved/no drinking water or sanitation, and peak RepRisk country ESG risk index). Flex performed a TCFD-aligned, quantitative scenario analysis to identify physical climate change risks to its global portfolio of manufacturing and logistics facilities. The analysis was based on publicly available data sets developed using methods that have undergone scientific peer review. For example, we used high-resolution climate model projections of future temperature and precipitation developed by the U.S. NASA. We used the RCP scenarios RCP4.5 and RCP8.5 to evaluate our facilities' exposure to climate change risks under a range of potential futures. RCP8.5 represents a higher GHG emissions future with increasing GHG emissions through 2100 and greater physical impacts from climate change, while RCP4.5 represents a future with decreasing GHG emissions after midcentury and lesser physical impacts. RCP4.5 is consistent with global warming of 2.4C by 2100 (range 1.7-3.2C) while RCP8.5 is consistent with global warming of about 4C by 2100 (range 3.2-5.4C). Flex also performed a TCFD-aligned, qualitative scenario analysis to identify potential risks and business opportunities arising from a low carbon transition. The transition scenario analysis relied on the assumptions and outputs of climate policy scenarios developed by the IEA and the Network for the Greening of the Financial System (NGFS). The scenarios explore different possible climate futures and map out the consequences of different choices for energy use and energy policies. We used the IEA's Sustainable Development Scenario (SDS) and Stated Policies Scenario (STEPS) to evaluate a wide range of future outcomes.

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Scenario Analysis 1: Flex performed a TCFD-aligned, quantitative scenario analysis to identify physical climate change risks to its global portfolio of manufacturing and logistics facilities. For each of our 100 manufacturing and logistics facilities, we evaluated present and future exposure to acute and chronic hazards from temperature and precipitation changes, coastal flooding, inland flooding, drought, tropical cyclones, water stress and wildfire. For each asset, projected modeled average annual losses (MAAL) due to climate change hazards were calculated for each decade from the 2020s to the 2090s. MAAL is the sum of losses due to climate-related expenses, decreased revenue, and/or business interruption and was used to estimate a range of future potential inherent physical risks for each facility. The scenario analysis was based on publicly available data sets developed using methods that have undergone scientific peer review. For example, we used high-resolution (“downscaled”) climate model projections of future temperature and precipitation developed by the U.S. National Aeronautics and Space Administration (NASA)⁵. We used the Representative Concentration Pathway (RCP)⁶ scenarios RCP4.5 and RCP8.5 to evaluate our facilities’ exposure to climate change risks under a range of potential futures. RCP8.5 represents a higher GHG emissions future with increasing GHG emissions through 2100 and greater physical impacts from climate change, while RCP4.5 represents a future with decreasing GHG emissions after midcentury and lesser physical impacts. RCP4.5 is consistent with global warming of 2.4C by 2100 (range 1.7-3.2C) while RCP8.5 is consistent with global warming of about 4C by 2100 (range 3.2-5.4C).

Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

The following were the focal questions of our scenario analysis: 1) What physical climate change risks impact our global portfolio of manufacturing and logistics facilities? 2) What potential losses can Flex incur due to climate-related expenses, decreased revenue, and/or business interruptions? 3) What are the potential impacts from acute and chronic climate changes on our supplier and direct operations? 4) What potential risks and business opportunities exist in the transition towards a low carbon economy? 5) What actions does Flex need to take in the next ten to twenty years to successfully transition to a low carbon economy? The results of the climate-related scenario analysis with respect to the focal questions were as follows: 1) The scenario analysis showed that all Flex assets are projected to be exposed to increases in average and extreme temperatures. Exposure to other climate change hazards varied with asset location. For example, exposure to flooding depends on future changes in precipitation, among other factors. Some regions are projected to see future increases in precipitation and flooding losses, while in other regions, changes in future losses due to flooding were minimal. 2) The scenario analysis showed potential impacts from both acute and chronic climate changes. For example, the results of the scenario analysis showed that some of Flex's coastal assets in the Asia-Pacific region are modeled to be exposed to acute storm surge and wind hazards from tropical cyclones. Rising sea levels are projected to increase these assets' exposure to storm surge hazards over time. Rising temperatures may pose a chronic risk to Flex's assets through losses in employee productivity, HVAC system degradation, and increases in cooling needs that are likely to increase cooling costs. This directly relates to the "strategy and financial planning" business process. 3) The analysis suggests that Flex's efforts to reduce its carbon footprint, increase energy efficiency and develop low carbon products and services have positioned the company well to minimize risks and maximize opportunities from the transition to the low-carbon transition. Flex's movement toward regionalization and emphasis on procuring renewable energy reduces its carbon footprint and reduces exposure to future GHG emission regulation. 4) Flex's greatest transition risk exposure is via its customers and supply chain. In a rapid transition to a low carbon economy Flex may experience challenges in sourcing critical materials (semi-conductor chips, materials for batteries, low carbon steel), Flex's suppliers and customers may face similar challenges. Flex is exposed to the transition risks of its customers – if they fail to adapt to the low carbon economy, Flex may face revenue and reputational impacts. 5) Flex operates in geographies where sourcing renewable energy may become more difficult, especially in an accelerated energy transition in rapidly growing markets where demand for renewable energy increases quickly and ahead of available supply. Although Flex is pursuing a regionalization strategy, increased carbon-related costs from long-distance transport using difficult-to-decarbonize methods (ships, aviation, heavy-duty trucks) represent a near-term risk that may lessen with time as new technologies are implemented in these sectors. The scenario analysis showed potential impacts from both acute and chronic climate changes that Flex is internally assessing. Based on the results of this scenario analysis, Flex has decided to take action by evaluating the adaptive capacity of a subset of business-critical sites to the hazards identified in the scenario analysis in order to determine each site's actual vulnerability to key modeled climate hazards. The results of this assessment will be used to drive site-specific adaptation/resilience planning efforts.

Water

(5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

- Risk and opportunities identification, assessment and management
- Strategy and financial planning
- Resilience of business model and strategy

(5.1.2.2) Coverage of analysis

Select from:

- Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

In 2024, 31% of our operational water withdrawals came from locations with high or extremely high baseline water stress. The operational efficiencies associated with mitigating water use have both environmental and business benefits, helping us reduce resources and decrease operating expenses. To minimize our impact where we use the most water, we deploy a water scarcity analysis at each of our facilities. Leveraging the World Resources Institute's Water Risk Atlas, we identify water conservation risks. We've implemented water conservation initiatives, such as smart sprinkler systems and water recycling and cooling tower technologies. Most of our facilities draw water from municipal sources and discharge wastewater to public treatment plants. In 2024, 16 water saving projects from 9 sites were recorded in a water savings project tracker, with 14 reaching the completion stage. Water savings from projects reported in this database are estimated to be approximately 30,000 cubic meters.

[Fixed row]

(5.2) Does your organization's strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

- No, but we are developing a climate transition plan within the next two years

(5.2.15) Primary reason for not having a climate transition plan that aligns with a 1.5°C world

Select from:

- Not an immediate strategic priority

(5.2.16) Explain why your organization does not have a climate transition plan that aligns with a 1.5°C world

In 2022, Flex conducted a TCFD-aligned quantitative and qualitative scenario analysis to identify potential risks and business opportunities arising from the transition towards a low carbon economy, aligning with a 1.5C world. The scenario analysis highlighted the potential for risks from extreme heat, water scarcity, and disruptions to the power grid. Flex's facilities are projected to see increases in extreme heat events and continuous function of cooling systems is critical to maintain facility temperatures in operational range. The results suggest that Flex's actions thus far have positioned the company well to minimize risks and maximize opportunities from the transition to a low-carbon economy. Flex is currently evaluating the results of this process and plans to develop an informed transition plan in coming years. While Flex does not currently have a formal transition plan that aligns with a 1.5C world, the company has incorporated climate change risks and opportunities into its 2030 strategy and is assessing the results of its 2022 transition and physical scenario analyses to inform additional business strategy aspects. In FY21, we developed our next set of long-term sustainability goals that focus on key areas where we can make a measurable, direct, and positive impact. We've set, and continue to build on, new sustainability goals through 2030 against a framework centered on our world, our people and our approach spanning several pillars. As part of these commitments, in FY21, Flex announced its commitment to cut operational emissions in half by 2030 as part of the company's new long-term sustainability strategy. In 2022, announced our commitment to reach net zero greenhouse gas emissions by 2040. In partnership with suppliers and customers, Flex has set bold environmental goals to combat climate change. Aligning scope 1, 2 and 3 emissions reduction targets, the company has joined the Science Based Targets initiative (SBTi), the global movement of leading companies working to reach the Paris Agreement's goal of limiting global temperature rise to 1.5C above preindustrial levels. Flex conducted a data analysis of each our scope 3 emissions as part of its acceptance into the SBTi. Flex is continuing to capitalize on business opportunities arising from the transition to a low-carbon economy, while addressing climate-related risks by enhancing operational resilience and accelerating decarbonization across its value chain.

Risks

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

ESG performance differentiates Flex in tenders, contributing to long-term wins in both our agility and reliability segments. Flex also generates significant revenues from sustainability-linked markets, including partnerships with solar leaders (e.g., SolarEdge, Enphase) and automotive electrification. Time horizon: Current (up to 1 year). Case Study: Flex is leveraging technologies to innovate and increase sales of products and services that enable our customers to understand their CO2 impacts and plan carbon reduction measures. In FY21, Flex launched a CO2 calculator that enables customers to measure their carbon footprint associated with products and prioritize carbon reduction measures: to understand CO2e embedded in their products and supply chain, conduct scenario and comparative analysis, measure CO2e reductions from mitigation activities, identify carbon hotspots, plan carbon budgeting, and develop a pathway towards Net Zero carbon impacts. This calculator was first used in 2022 and will continue to be used in future years. Services provided by the CO2 calculator can help our customers to develop more informed decisions and prioritize their carbon reduction actions and potential savings. The business opportunity associated with the development of tool-based

solutions, such as the CO2 calculator, values at more than 150 million. Climate-related impacts can also create revenue losses because of severe weather events (e.g., the 2021 winter storms across Texas and Mexico) that can impact our manufacturing operations. Losses could include business interruption (both shipments and supplies) as well as physical damage to facilities. These types of weather events have usefully informed our business continuity planning. In terms of likelihood and magnitude, these product related risks and opportunities are medium and there is potential for the revenue opportunities to be material. By embedding environmental factors into strategy and financial planning, Flex reduces risk exposure, enhances resilience, and captures growth opportunities aligned with customer sustainability priorities.

Row 2

(5.3.2.1) Financial planning elements that have been affected

Select all that apply

- Direct costs
- Indirect costs

(5.3.2.2) Effect type

Select all that apply

- Risks

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

Direct Costs: Anticipated carbon pricing (EU ETS, CBAM) is managed through efficiency, renewable sourcing, and logistics optimization. Indirect Costs: Physical climate risks influence insurance, contingency planning, and supply chain risk management. Increasing or decreasing temperatures could impact site energy usage and increase operational costs or disrupt production capacity. This risk is being managed through improved efficiencies in usage and facilities climate control and through the addition of site power generation capabilities, where appropriate. There are no significant cost expenditures at this time. The management monitoring this development will not increase because existing teams will work on this issue. This is a risk that has a high likelihood of occurrence and is medium in terms of magnitude. We are continuing to invest in LED lighting, onsite solar and are investigating procurement of green energy through local utilities, PPAs, etc. Time horizon: Current (up to 1 year)

Row 3

(5.3.2.1) Financial planning elements that have been affected

Select all that apply

- Acquisitions and divestments

(5.3.2.2) Effect type

Select all that apply

- Risks

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

We are looking for growth opportunities in several areas that have the potential to mitigate climate change, including renewable energy, connected home, autonomous vehicles, smart agriculture, and supply chain optimization. This opportunity is lower in likelihood only because it depends upon what our customers pursue from a strategic standpoint and the nature of the services we provide, e.g. design vs. assembly only. The magnitude could be high because of the demand for climate change solutions in all of the sectors mentioned above, but the timeframe is relatively long and thus the size of the opportunity is somewhat speculative. Time horizon: Short- to medium-term (1-5 years). By embedding environmental factors into strategy and financial planning, Flex reduces risk exposure, enhances resilience, and captures growth opportunities aligned with customer sustainability priorities.

- Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

Climate-related risks and opportunities are impacting on our access to capital, and we are working continuously to meet our investors' expectations. Our Sustainability team is monitoring the development of climate change issues through our regulations and market intelligence function and feeds any insights back into our market strategy. Our mid-to-long term plan is to shift mix to a more diversified, higher value portfolio, also including the expansion of our Industrial and Emerging Industries (IE) segment covering energy-efficient products, such electric vehicle infrastructure. We are growing our differentiated capabilities to continue meeting and anticipating customer and market needs and create value for our existing and new customers. We have new business development teams investigating market opportunities on a daily basis (Energy segment, New Ventures segment, Strategic Marketing Operations, etc.). Time horizon: Short- to medium-term (1-5 years). By embedding environmental factors into strategy and financial planning, Flex reduces risk exposure, enhances resilience, and captures growth opportunities aligned with customer sustainability priorities.

Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

Physical climate-related impacts, such as severe weather events have impacted our facilities in China and India, leading to temporary impairment of business as well as physical damage to structures and other facilities. The most recent storm that significantly affected our business took place in February 2021. Our factory in operations in Austin, Texas and our Juarez North, Juarez South, and Reynosa facilities in Mexico were exposed to a severe winter storm that disconnected power, damaged infrastructure, and paused the water supply. Even when the water connection was reactivated, our Austin site did not have access for potable water for several days. Operations were closed for a week, causing losses and business disruptions, as well as physical damage to our facilities. We could also experience business interruptions indirectly, as a result of service interruption from utilities, transportation or telecommunications providers. Reduced production due to business interruption can affect our ability to timely deliver products to our customers, or perform critical business functions, which could adversely affect our revenue and

require significant recovery time and expenditures to resume operations. Transition climate risks related to carbon pricing policies lead to increased operating costs associated with reporting, disclosure, environmental compliance and management (e.g., taxes, purchase levies, or management costs such as consulting and IT fees). We could also incur costs associated with altering our manufacturing and operations in order to comply with environmental regulations. In addition, our failure to comply with environmental laws and regulations could also limit our ability to expand our facilities. Time horizon: Short- to medium-term (1-5 years). By embedding environmental factors into strategy and financial planning, Flex reduces risk exposure, enhances resilience, and captures growth opportunities aligned with customer sustainability priorities.

[Add row]

(5.4) In your organization’s financial accounting, do you identify spending/revenue that is aligned with your organization’s climate transition?

	Identification of spending/revenue that is aligned with your organization’s climate transition
	Select from: <input checked="" type="checkbox"/> No, but we plan to in the next two years

[Fixed row]

(5.9) What is the trend in your organization’s water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

(5.9.1) Water-related CAPEX (+/- % change)

0

(5.9.2) Anticipated forward trend for CAPEX (+/- % change)

0

(5.9.3) Water-related OPEX (+/- % change)

0

(5.9.4) Anticipated forward trend for OPEX (+/- % change)

0

(5.9.5) Please explain

Access to an affordable, reliable and adequate freshwater supply is critical to the success of our business because it is required across our operations to meet customer needs. The primary use of freshwater in our direct operations is for sanitation, drinking water, cooking, etc. In our manufacturing operations, freshwater is also used for rinsing parts in our painting lines, cleaning, HVAC and cooling water, etc. i. Our budget for water-related CAPEX and OPEX remains more or less the same year to year, as we do not anticipate our potable water needs changing, and we do not yet have largescale reclaimed water systems to offset our dependency. ii. In 2024, water-related expenditure (CAPEX and OPEX) were allocated to projects for water recycling and reuse, as well as upgrading sanitary facilities and equipment.

[Fixed row]

(5.10) Does your organization use an internal price on environmental externalities?

	Use of internal pricing of environmental externalities	Primary reason for not pricing environmental externalities	Explain why your organization does not price environmental externalities
	Select from: <input checked="" type="checkbox"/> No, and we do not plan to in the next two years	Select from: <input checked="" type="checkbox"/> Not an immediate strategic priority	This is part of our long-term plan

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

While conducting business with or on behalf of Flex, our suppliers and our employees, agents, and subcontractors must understand and adhere to our Supplier Code of Conduct ("Code") which is based on ISO 14001 and the Eco Management and Audit System (EMAS) and is aligned with the Responsible Business Alliance (RBA) standards. We expect all our suppliers to implement appropriate and effective policies to ensure compliance with the code and all relevant laws and regulations. The code applies to 100% of suppliers including, but not limited to, those engaged in: • Manufacturing products, packaging, parts, components, subassemblies, materials or otherwise involved in processes related to any of the foregoing; and • Providing services to, or on behalf of Flex, regardless of type, location or duration. Adoption of compliance to the Responsible Business Alliance Code of Conduct ("RBA Code") is fundamental to the code. The RBA embodies a set of standards on social, environmental and ethical issues in the supply chain. Our standards exceed those of the RBA Code. We require additional compliance with respect to the social and environmental responsibility requirements. The RBA Code states that energy consumption and all relevant Scope 1 and Scope 2 greenhouse gas emissions are to be tracked and documented, at the facility and/or corporate level. Participants are to look for cost-effective methods to improve energy efficiency and to minimize their energy consumption and greenhouse gas emissions.

(5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental issue

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

Flex is working with our suppliers to have a commit that 50% of our 'Preferred Suppliers' will set their own GHG emissions reduction targets by 2025 and 100% by 2030. For Scope 3, we have 21 providers already participating in CDP and these providers cover almost 90% of our total logistic spend. All our strategic suppliers

have published annual corporate social responsibility reports and have the capability to allocate GHG emissions to us. Flex also works with preferred suppliers to reduce emissions across the value chain is part of our multi-pronged approach to reach net-zero greenhouse gas emissions by 2040. To do so, we are focused on bringing a segment of our suppliers on board as part of our sustainability strategy. We commit that 50 percent of our preferred suppliers will set greenhouse gas (GHG) emissions reduction targets by 2025, and 100 percent of preferred suppliers will do the same by 2030.

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

Our worldwide supply chain embraces roughly 16,000 direct, indirect and vertically integrated suppliers, most of whom are controlled by our customers. For top suppliers where we have control, we have developed a Preferred Supplier Program (PSP) based on commodity, unique capabilities, spend and commercial negotiations. In 2024, there were 1847 suppliers in our PSP, of which 94% have been assessed via our Self-Assessment Questionnaire (SAQ). Flex's supplier SAQ contains questions related to the measurement, monitoring and existence of systems to reduce impacts from water use, discharge, air emissions (e.g., VOCs, ozone depleting substances, GHG emissions), energy use, waste, and hazardous materials.

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

- 76-99%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Each year, we have one-on-one discussions with customers on our GHG emissions performance or GHG target-setting.. As a service business, we are focused on serving our customers' needs, so most of these efforts are initiated by customers as part of their efforts to evaluate and reduce their own Scope 3 GHG emissions. We have an internal system for account and program managers to share their customers' sustainability needs and inquiries to make sure these are addressed. We have a target that 70% of our customers by emissions covering purchased goods and services, capital goods and use of sold products will have science-based targets by 2025. In 2024, 100% of our customer-related Scope 3 emissions were engaged and had science-based targets. This figure represents 100% of progress against the 70% target (100%/100%). We engage with the customers that have the largest customer-related Scope 3 emissions. We support customers aiming to reduce Scope 3 emissions by offering design-for-sustainability solutions. Upon request, and when feasible and within scope, we may also provide product carbon footprint estimates or other relevant component-level information

(5.11.9.6) Effect of engagement and measures of success

Process optimization and reduction of energy and related GHG emissions are examples of the beneficial outcomes of our engagement with key customers. Measures of success for this engagement include: (1) net reduction in energy consumption, (2) net reduction in related GHG emissions from energy efficiency or transition to renewables, (3) related cost-savings. The threshold of the measure of success is that the customer has a decrease in related GHG emissions.

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Flex values feedback and input from our internal and external stakeholders, which include, but are not limited to, employees, customers, shareholders, potential investors, suppliers, subcontractors, labor agents, governments/regulatory agencies, unions, NGOs and industry associations. Using customer surveys, customer requests, business reviews, materiality assessments and regular collaboration we are able to gain understanding of our stakeholder's vision to drive success. Our engagement strategy provides opportunities to align on sustainability goals where we can collaborate to make industry-wide impact. Flex values feedback and input from our internal and external stakeholders, which include, but are not limited to, employees, customers, shareholders, potential investors, suppliers, subcontractors, labor agents, governments/regulatory agencies, unions, NGOs and industry associations. Using customer surveys, customer requests, business reviews, materiality assessments and regular collaboration we are able to gain understanding of our stakeholder's vision to drive success. Our engagement strategy provides opportunities to align on sustainability goals where we can collaborate to make industry-wide impact.

(5.11.9.6) Effect of engagement and measures of success

Based on stakeholder concern, we regularly update our materiality assessment and publish information based on requests for qualitative and quantitative sustainability information, including water withdrawal and water management. We use multiple communication channels to inform stakeholders, including written communication, meetings, tradeshow, regular and specialized reports, contracts, surveys, and other methods. Engagement may be daily, monthly, quarterly, annually or as needed to keep an open dialog with all stakeholders. We strive to incorporate our stakeholders' priorities into our business and corporate sustainability strategy. In 2021, materiality topics key to our stakeholders included emissions, energy, waste, and water management, among others. Each year, we publish our annual Sustainability Executive Report and online GRI content index to share information on our progress, including that on water usage. Flex measures of success include (1) frequency of engagement with our customers and other partners in our value chain, (2) # of tradeshow, events and conferences attended per year, (3) # of customer visits to Flex customer innovation centers.

Flex is the advanced, end-to-end manufacturing partner of choice that helps a diverse customer base design, build, deliver and manage innovative products that improve the world. Through the collective strength of a global workforce across ~30 countries with responsible, sustainable operations, Flex delivers technology innovation, supply chain, and manufacturing solutions to diverse industries and end markets. Our full suite of specialized capabilities includes design and engineering, supply chain, manufacturing, post-production and post-sale services, and proprietary products. Flex partners with customers across a diverse set of industries including data center, communications, enterprise, consumer, automotive, healthcare, industrial and power. Aligned with Flex's 2030 sustainability strategy, we develop customer awareness initiatives around circular economy to help our customers understand their carbon footprint and prioritize reduction activities. Businesses are held to higher standards for sourcing, production, and disposal of products. Through our circular economy solutions, we partner with customers—from design innovation and advanced manufacturing to aftermarket services and end-of-life—to minimize environmental impact across the product lifecycle. These solutions provide additional value to our customers and create new opportunities for Flex. Transparency and accountability are crucial, and the trust we've built with stakeholders is based on consistent results. Flex engages top electronic manufacturing customers who benefit from our global logistics services incorporating circular economy principles, including repair and refurbishment of electronic devices and advanced analytical solutions like our CO2 calculator. This tool helps customers quantify carbon embedded in their products and understand CO2e impacts of different end-of-use decisions. The early version of our CO2 calculator was shared with a targeted group of customers, including hardware-producing tech companies with ambitious carbon reduction targets and those involved in circular economy organizations like the Ellen MacArthur Foundation. Their feedback enabled us to adapt and launch the CO2 tool in 2021 for the broader market. We support customers seeking to enhance circularity by offering guidance on design-for-sustainability solutions & packaging reuse options. When requested and feasible, we also provide component-level data on the use of secondary (recycled or recovered) materials.

(5.11.9.6) Effect of engagement and measures of success

Flex engages customers by providing circular economy solutions to minimize the carbon impacts associated with our customers' products, maximize their product's value recovery, and ensure sustainability stewardship. Flex offers a broad range of integrated reverse logistics and circular economy services including, CO2 analytics, returns and screening, repair, refurbishment, asset recovery, spare parts logistics, and recycling. Coupled with supply chain, manufacturing, and post-production services, we tailor solutions specific to customers' sustainability and business objectives while helping meet regulatory requirements. Our customers are increasingly requesting data to help inform and implement their circular economy strategy. Flex can provide data driven and actionable insights during the design phase to support and guide customers on how to incorporate sustainable materials, identify sustainable supply chain decisions, and optimize existing and next generation products for disassembly and reuse. Flex offers a suite of modeling tools, including our proprietary impact calculator, ECO₂, which estimates circular scenarios and the associated environmental savings achieved. Through calculators like ECO₂ and intelligent reporting capabilities, Flex helps customers determine the optimal repair, refurbishment, spare parts logistics, or recycling solutions to help reduce certain categories of scope 3 emissions, waste, energy, and water and to quantify value recovery activities.

C6. Environmental Performance - Consolidation Approach

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.

	Consolidation approach used	Provide the rationale for the choice of consolidation approach
Climate change	<i>Select from:</i> <input checked="" type="checkbox"/> Operational control	<i>We believe that this consolidation approach is the most comprehensive to fully account for our company's footprint.</i>
Water	<i>Select from:</i> <input checked="" type="checkbox"/> Operational control	<i>We believe that this consolidation approach is the most comprehensive to fully account for our company's footprint.</i>

[Fixed row]

C7. Environmental performance - Climate Change

(7.1) Is this your first year of reporting emissions data to CDP?

Select from:

No

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

	Has there been a structural change?
	Select all that apply <input checked="" type="checkbox"/> No

[Fixed row]

(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

	Change(s) in methodology, boundary, and/or reporting year definition?
	Select all that apply <input checked="" type="checkbox"/> No

[Fixed row]

(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.

Select all that apply

- The Greenhouse Gas Protocol: Scope 2 Guidance
- US EPA Emissions & Generation Resource Integrated Database (eGRID)
- The Greenhouse Gas Protocol: Corporate Value Chain (Scope 3) Standard
- The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)
- US EPA Center for Corporate Climate Leadership: Indirect Emissions From Purchased Electricity
- US EPA Center for Corporate Climate Leadership: Direct Emissions from Mobile Combustion Sources
- US EPA Center for Corporate Climate Leadership: Direct Emissions from Stationary Combustion Sources
- US EPA Center for Corporate Climate Leadership: Direct Fugitive Emissions from Refrigeration, Air Conditioning, Fire Suppression, and Industrial Gases

(7.3) Describe your organization’s approach to reporting Scope 2 emissions.

	Scope 2, location-based	Scope 2, market-based	Comment
	Select from: <input checked="" type="checkbox"/> We are reporting a Scope 2, location-based figure	Select from: <input checked="" type="checkbox"/> We are reporting a Scope 2, market-based figure	We report both location and market-based emissions

[Fixed row]

(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?

Select from:

- No

(7.5) Provide your base year and base year emissions.

Scope 1

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

102364

(7.5.3) Methodological details

Scope 1 emissions include stationary combustion, mobile combustion, and refrigerants.

Scope 2 (location-based)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

724465

(7.5.3) Methodological details

Scope 2 emissions include electricity and steam.

Scope 2 (market-based)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

(7.5.3) Methodological details

Scope 2 emissions include electricity and steam.

Scope 3 category 1: Purchased goods and services**(7.5.1) Base year end**

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

5103717

(7.5.3) Methodological details

Purchased goods and services cradle-to-gate emissions are calculated by combining Flex's total 2019 spend data into sector categories. The spend in each category is multiplied by sector-specific emission factors from the U.S. EPA Supply Chain GHG Emission Factors for US Industries and Commodities (US EEIO).

Scope 3 category 2: Capital goods**(7.5.1) Base year end**

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

283086

(7.5.3) Methodological details

Capital Goods cradle-to-gate emissions are calculated by combining Flex's total 2019 spend data into sector categories. The spend in each category is multiplied by sector-specific emission factors from the U.S. EPA Supply Chain GHG Emission Factors for US Industries and Commodities (US EEIO).

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

200540

(7.5.3) Methodological details

FERA emissions are calculated based on the amount of energy consumed per energy type (electricity, natural gas, etc.). Total consumption by each fuel type is multiplied by the appropriate emission factor. The upstream emission factor for purchased fuel is based on life-cycle analysis software. The emission factor for upstream emissions of purchased electricity is based on life cycle analysis for the United States and based on the UK DEFRA Guidelines for other countries. The transmission and distribution emission factors are location-based and taken from the EPA's eGRID database for the United States and based on UK DEFRA Guidelines for other countries. In 2022, Flex conducted a comprehensive review and rebaselined its base year emissions to enhance the accuracy of its sustainability metrics.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

235625

(7.5.3) Methodological details

The emissions for upstream transportation and distribution includes emissions from Flex's main logistics providers. Each logistics provider provided the emissions that were attributed to Flex, using standard calculation methodologies. In 2022, Flex conducted a comprehensive review and rebaselined its base year emissions to enhance the accuracy of its sustainability metrics.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

30529

(7.5.3) Methodological details

In 2022, Flex conducted a comprehensive review and rebaselined its base year emissions to enhance the accuracy of its sustainability metrics.

Scope 3 category 6: Business travel

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

24166

(7.5.3) Methodological details

Business travel emissions include air travel, rail travel, rental cars, and hotel stays. In 2022, Flex conducted a comprehensive review and rebaselined its base year emissions to enhance the accuracy of its sustainability metrics.

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

105165

(7.5.3) Methodological details

In 2022, Flex conducted a comprehensive review and rebaselined its base year emissions to enhance the accuracy of its sustainability metrics.

Scope 3 category 8: Upstream leased assets

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

0

(7.5.3) Methodological details

Not relevant

Scope 3 category 9: Downstream transportation and distribution

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

12401

(7.5.3) Methodological details

In 2022, Flex conducted a comprehensive review and rebaselined its base year emissions to enhance the accuracy of its sustainability metrics.

Scope 3 category 10: Processing of sold products

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

33

(7.5.3) Methodological details

In 2022, Flex conducted a comprehensive review and rebaselined its base year emissions to enhance the accuracy of its sustainability metrics.

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

100846113

(7.5.3) Methodological details

Flex estimates use of sold products emissions by categorizing our thousands of sold products into standard product categories. These product categories are assigned an annual electricity consumption value based on research and actual Flex data. The number of products sold per category is multiplied by the annual electricity consumption and the assumed lifetime of the product, which is based on Flex market segment data. Data on number of sold products was collected for a subset of all sold products; emissions were then adjusted based on the revenue of sold products with data vs all sold products. Emissions are calculated from this electricity and are from EPA's eGRID2020 US Average emission factors or International Energy Agency regional emission factors.

Scope 3 category 12: End of life treatment of sold products

(7.5.1) Base year end

12/31/2019

(7.5.2) Base year emissions (metric tons CO2e)

4138

(7.5.3) Methodological details

(7.8.3) Emissions calculation methodology

Select all that apply

Distance-based method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Emissions from commuting include emissions from a portion of employees utilizing shuttles that transport employees to and from work, as well as emissions based on employees travelling to and from work in their own vehicles. Shuttle emissions are calculated based on the miles travelled, fuel consumed, and fuel type, per shuttle route. The remainder of commuting emissions were based on a commuting survey completed by a portion of Flex's employees. Information collected included distance travelled to work, number of days employees commute to work, and mode of transportation. Based on this analysis, commuting emissions per responding employee were calculated. This value was then applied to remaining employees to extrapolate emissions for all employees. Total emissions for each mode of transportation, plus the shuttle emissions, were calculated using emission factors and methodologies from EPA Emission Factors for Greenhouse Gas Inventories, Climate Leaders Mobile Source Guidance, Climate Leaders Business Travel and Commuting Guidance, and Guidelines to Defra / DECC's GHG Conversion Factors for Company Reporting. GWPs are IPCC Fifth Assessment Report (AR5 - 100 year). Rounded numbers are presented to account for the inherent uncertainty associated with scope 3 emissions calculations.

Upstream leased assets

(7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

(7.8.5) Please explain

Under the operational control approach which we use to define our inventory boundary, all emissions from all upstream leased assets are included in our Scope 1 and Scope 2 emissions, therefore upstream leased assets constitute 0% of our scope 3 emissions.

Downstream transportation and distribution

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Flex does not have primary data on the processing of their sold products. Therefore, assumptions were made to estimate the emissions associated with processing Flex's sold products. The number of Flex sold products that require additional processing was multiplied by the assumed electricity used per product to process Flex's product. This assumed electricity is based on research of electricity usage in a "pick and place" machine. Data on number of sold products was collected for a subset of all sold products; emissions were then adjusted based on the revenue of sold products with data vs all sold products. Emissions are calculated from this electricity and are from EPA's eGRID2022 US Average emission factors or International Energy Agency regional emission factors. GWPs are IPCC Fifth Assessment Report (AR5- 100 year). Rounded numbers are presented to account for the inherent uncertainty associated with scope 3 emissions calculations.

(7.9.3) Provide further details of the verification/assurance undertaken for your Scope 3 emissions and attach the relevant statements.

Row 1

(7.9.3.1) Scope 3 category

Select all that apply

- Scope 3: Investments
- Scope 3: Capital goods
- Scope 3: Business travel
- Scope 3: Employee commuting
- Scope 3: Use of sold products
- Scope 3: Downstream transportation and distribution
- Scope 3: Fuel and energy-related activities (not included in Scopes 1 or 2)
- Scope 3: Processing of sold products
- Scope 3: Purchased goods and services
- Scope 3: Waste generated in operations
- Scope 3: End-of-life treatment of sold products
- Scope 3: Upstream transportation and distribution

(7.9.3.2) Verification or assurance cycle in place

Select from:

- Annual process

(7.9.3.3) Status in the current reporting year

Select from:

- Complete

(7.9.3.4) Type of verification or assurance

Select from:

- Limited assurance

(7.9.3.5) Attach the statement

DNV Statement_Flex 2024 GHG Verification_Rev0.pdf

(7.9.3.6) Page/section reference

Whole document

(7.9.3.7) Relevant standard

Select from:

ISO14064-3

(7.9.3.8) Proportion of reported emissions verified (%)

100

[Add row]

(7.10) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Select from:

Decreased

(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

Change in renewable energy consumption

(7.10.1.1) Change in emissions (metric tons CO2e)

31828

(7.10.1.2) Direction of change in emissions

Select from:

Decreased

(7.10.1.3) Emissions value (percentage)

6

(7.10.1.4) Please explain calculation

*One way Flex has reduced market-based emissions is by purchasing electricity through contracts with suppliers supported by energy attribute certificates. The resulting market-based emission reduction was 31828 metric tons CO₂e, divided by our total reported emissions in the previous year of 496560 metric tons CO₂e gives a 6.4% reduction $(31828/496560)*100 = 6.4\%$.*

Other emissions reduction activities

(7.10.1.1) Change in emissions (metric tons CO₂e)

40642

(7.10.1.2) Direction of change in emissions

Select from:

Decreased

(7.10.1.3) Emissions value (percentage)

8

(7.10.1.4) Please explain calculation

*Flex implements energy efficiency projects resulting in a market-based emission reduction of 40642 metric tons CO₂e, divided by our total reported emissions in the previous year of 496560 metric tons CO₂e gives a 8% reduction $(40642/496560)*100 = 8\%$.*

Divestment

(7.10.1.1) Change in emissions (metric tons CO₂e)

0

(7.10.1.2) Direction of change in emissions

Select from:

No change

(7.10.1.3) Emissions value (percentage)

0

(7.10.1.4) Please explain calculation

Not relevant to Flex this year

Acquisitions

(7.10.1.1) Change in emissions (metric tons CO2e)

0

(7.10.1.2) Direction of change in emissions

Select from:

No change

(7.10.1.3) Emissions value (percentage)

0

(7.10.1.4) Please explain calculation

Not relevant to Flex this year

Mergers

(7.10.1.1) Change in emissions (metric tons CO2e)

0

(7.10.1.2) Direction of change in emissions

Select from:

No change

(7.10.1.3) Emissions value (percentage)

0

(7.10.1.4) Please explain calculation

Not relevant to Flex this year

Change in output

(7.10.1.1) Change in emissions (metric tons CO2e)

0

(7.10.1.2) Direction of change in emissions

Select from:

No change

(7.10.1.3) Emissions value (percentage)

0

(7.10.1.4) Please explain calculation

Not relevant to Flex this year

Change in methodology

(7.10.1.1) Change in emissions (metric tons CO2e)

163169

(7.10.1.2) Direction of change in emissions

Select from:

Decreased

(7.10.1.3) Emissions value (percentage)

1

(7.10.1.4) Please explain calculation

*Improved data quality, changes in business activity, and more supplier-specific emission factors have contributed to an increase of 1% reduction in market-based emissions. The increase was -163169 metric tons CO2e, divided by our total reported emissions in the previous year of 496560 metric tons CO2e gives an 1% reduction $(-163169/496560)*100 = 1\%$.*

Change in boundary

(7.10.1.1) Change in emissions (metric tons CO2e)

0

(7.10.1.2) Direction of change in emissions

Select from:

No change

(7.10.1.3) Emissions value (percentage)

(7.10.1.2) Direction of change in emissions

Select from:

No change

(7.10.1.3) Emissions value (percentage)

(7.10.1.4) Please explain calculation

Not relevant to Flex this year

Other**(7.10.1.2) Direction of change in emissions**

Select from:

No change

(7.10.1.4) Please explain calculation

Not relevant for Flex this year.

[Fixed row]

(7.10.2) Are your emissions performance calculations in 7.10 and 7.10.1 based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?

Select from:

Market-based

(7.12) Are carbon dioxide emissions from biogenic carbon relevant to your organization?

Select from:

Yes

(7.12.1) Provide the emissions from biogenic carbon relevant to your organization in metric tons CO₂.

	CO2 emissions from biogenic carbon (metric tons CO2)	Comment
	4	<i>Our biogenic emissions for 2024 are 4 metric tons of CO2</i>

[Fixed row]

(7.15) Does your organization break down its Scope 1 emissions by greenhouse gas type?

Select from:

Yes

(7.15.1) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used global warming potential (GWP).

Row 1

(7.15.1.1) Greenhouse gas

Select from:

CO2

(7.15.1.2) Scope 1 emissions (metric tons of CO2e)

73023

(7.15.1.3) GWP Reference

Select from:

IPCC Fifth Assessment Report (AR5 – 100 year)

Row 2

(7.15.1.1) Greenhouse gas

Select from:

CH4

(7.15.1.2) Scope 1 emissions (metric tons of CO2e)

(7.30.9.4) Generation from renewable sources that is consumed by the organization (MWh)

0

[Fixed row]

(7.30.14) Provide details on the electricity, heat, steam, and/or cooling amounts that were accounted for at a zero or near-zero emission factor in the market-based Scope 2 figure reported in 7.7.

Row 1

(7.30.14.1) Country/area

Select from:

United States of America

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Wind

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

56787

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

United States of America

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

Yes

(7.30.14.9) Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)

2015

Row 2

(7.30.14.1) Country/area

Select from:

Austria

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Hydropower (capacity unknown)

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

4575

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Austria

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

No

Row 3

(7.30.14.1) Country/area

Select from:

Ireland

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Renewable energy mix, please specify :Wind, solar, biomass, and hydropower

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Ireland

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

No

Row 4**(7.30.14.1) Country/area**

Select from:

Denmark

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Hydropower (capacity unknown)

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

1394

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Denmark

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

No

Row 5

(7.30.14.1) Country/area

Select from:

India

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Solar

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

14724

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

India

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

No

Row 6

(7.30.14.1) Country/area

Select from:

China

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Renewable energy mix, please specify :Wind, solar, biomass, and hydropower

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

106596

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

China

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

Yes

(7.30.14.9) Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)

2020

Row 7

(7.30.14.1) Country/area

Select from:

- United Kingdom of Great Britain and Northern Ireland

(7.30.14.2) Sourcing method

Select from:

- Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

- Electricity

(7.30.14.4) Low-carbon technology type

Select from:

- Renewable energy mix, please specify :Wind, biomass

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

4092

(7.30.14.6) Tracking instrument used

Select from:

- Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

- United Kingdom of Great Britain and Northern Ireland

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

No

Row 8

(7.30.14.1) Country/area

Select from:

Singapore

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Renewable energy mix, please specify :Wind, solar, biomass, and hydropower

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

8060

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Singapore

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

No

Row 9

(7.30.14.1) Country/area

Select from:

Italy

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Renewable energy mix, please specify :Wind, solar, geothermal, and hydropower

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

4422

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Italy

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

No

Row 10

(7.30.14.1) Country/area

Select from:

Romania

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Renewable energy mix, please specify :Wind, solar, geothermal, and hydropower

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

22876

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Romania

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

Yes

(7.30.14.9) Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)

2022

Row 11

(7.30.14.1) Country/area

Select from:

Poland

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Sustainable biomass

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

23534

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Poland

(7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

Yes

(7.30.14.9) Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)

2022

Row 12

(7.30.14.1) Country/area

Select from:

Hungary

(7.30.14.2) Sourcing method

Select from:

Retail supply contract with an electricity supplier (retail green electricity)

(7.30.14.3) Energy carrier

Select from:

Electricity

(7.30.14.4) Low-carbon technology type

Select from:

Renewable energy mix, please specify :Wind and hydropower

(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

59301

(7.30.14.6) Tracking instrument used

Select from:

Contract

(7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

(7.45.4) Metric denominator: Unit total

25584000000

(7.45.5) Scope 2 figure used

Select from:

Location-based

(7.45.6) % change from previous year

6

(7.45.7) Direction of change

Select from:

Increased

(7.45.8) Reasons for change

Select all that apply

Change in renewable energy consumption

Other emissions reduction activities

Change in revenue

(7.45.9) Please explain

Scope 1 and 2 location-based gross emissions decreased by 8% from the prior year. This, plus the 13% decrease in revenue from 2024 results in an overall 6% increase in gross location-based GHG intensity per dollar of revenue. The decrease in revenue was the primary driver to the increase in gross GHG intensity per dollar of revenue.

Underway

(7.53.1.82) Explain target coverage and identify any exclusions

Flex commits to reduce absolute scope 1 and 2 GHG emissions 50% by 2030 from a 2019 base year. This target was approved by Flex in 2020, publicly launched and formally approved by SBTi in 2021. Additionally, Flex is exploring setting a net-zero target in the near future.

(7.53.1.83) Target objective

The target covering greenhouse gas emissions from company operations (scopes 1 and 2) are consistent with reductions required to keep warming to 1.5C.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

Flex plans to achieve this target by implementing energy efficiency at our sites, installing onsite solar systems, and gathering more supplier-specific emission factors. During 2024, Flex implemented numerous energy reduction initiatives. The project resulting in the most energy savings was due to improving energy efficiency in buildings. Aging lighting and low efficiency heat pumps and HVAC equipment were replaced with newer, high efficiency models and LED lighting. Even more energy was saved by shutting down plants and reducing air conditioning during national holidays or during periods of reduced activity onsite, adjusting the equipment set point during peak hours. In interest of advancing decarbonization strategies within our own operations, as well as across the value chain, we have also committed to supporting the circular economy. We plan to certify as many facilities as zero waste as we can and to implement waste reduction strategies throughout all other manufacturing and logistics sites. Over the last decade, we've learned immensely from our eco-conscious customers about processes that improve environmental outcomes. In 2012, we founded Sinctronics, our circular economy and manufacturing operations in Sorocaba, Brazil, after a key partner, encouraged us to recycle the electronic waste generated from the production of printers, motherboards and other IT products. Since then, we've developed processes and technologies to recycle not only electronic waste but also industrial waste such as plastics, cardboard and wooden pallets. In parallel, we pioneered circular manufacturing processes, making new parts from recycled materials. Through reuse, as much as 80 percent greenhouse gas emissions can be prevented. By the end of calendar year 2024, 35 of our sites were internally validated as zero waste. Each of these sites meets UL certification standards, which require a diversion rate of at least 90% to achieve designation, and are widely distributed in the Americas, APAC, and EMEA regions.

Decision Letter - Flex Ltd.pdf

(7.54.2.18) Please explain target coverage and identify any exclusions

Flex commits to partner with 70% of customers by emissions covering purchased goods and services, capital goods and use of sold products to set science-based targets by 2025. The percentage in target year 2025 is representative of 100% of customers contributing to 70% of purchased goods and services, capital goods, and use of sold products.

(7.54.2.19) Target objective

Collaborate with customers to reduce emissions

(7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year

Under our 2030 strategy and goals, we committed that 70% of our customers by emissions covering purchased goods and services, capital goods and use of sold products will have science-based targets by 2025. We value our opportunities to engage with our customers and explore opportunities to deepen our progress on ESG-related issues. Using customer surveys, business reviews, materiality assessments and regular collaboration we are able to gain understanding of our customers' vision to drive success. Our engagement strategy provides opportunities to align on sustainability goals where we can collaborate to make industry-wide impact. We recognize that our emissions reduction goals are interdependent. Therefore, we have invited our customers to join this journey with us. As trusted partners with both our suppliers and customers, we leverage frameworks such as TCFD and CDP to share knowledge and best practices and accelerate sustainability throughout the value chain.

Select all that apply

No, it's not part of an overarching initiative

(7.54.2.18) Please explain target coverage and identify any exclusions

Flex requires 50% of its preferred suppliers to set greenhouse gas emissions reduction targets by 2025, and 100% by 2030.

(7.54.2.19) Target objective

Incentivize suppliers to reduce emissions

(7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year

Flex's main plan to achieve this target is active communication with suppliers. Our communication includes webinars, trainings, and supplier-specific consulting sessions to support their environmental reporting and emissions reduction target development. At the end of 2024, 58% of Flex's preferred suppliers had set a GHG emissions reduction target. Flex's actions in the past year that have contributed to most to progress on this supplier target are: • Upper management communicating the importance of the program • Internal education to all stakeholders of the program • Greenhouse gas emissions trainings to provide an overview and concepts • GHG Emissions calculations and Reduction Structured targets guidance and support to define and set targets • Personalized, 1:1 supplier sessions • Resources for suppliers to calculate their emissions • Closure of the submission cycle along with CDP's data analysis and scorecards Flex also provides one-on-one meetings with suppliers that need support responding to the CDP questionnaire. Flex has also expanded it's supplier outreach to provide these webinars in Chinese, as well as English, to reach suppliers in the Chinese market. In addition to annual sustainability trainings on both the Flex and RBA Codes of Conduct and best practices of all Flex's sustainability programs.

This initiative forms part of our broader program to reduce Scope 1 and Scope 2 greenhouse gas emissions.

Row 9

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

Heating, Ventilation and Air Conditioning (HVAC)

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

8020

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

1675256

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

8479688

(7.55.2.7) Payback period

Select from:

4-10 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

Ongoing

(7.55.2.9) Comment

This initiative forms part of our broader program to reduce Scope 1 and Scope 2 greenhouse gas emissions.

Row 10

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

Insulation

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

106

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 1

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

46637

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

1412

(7.55.2.7) Payback period

Select from:

<1 year

(7.55.2.8) Estimated lifetime of the initiative

Select from:

Ongoing

(7.55.2.9) Comment

This initiative forms part of our broader program to reduce Scope 1 and Scope 2 greenhouse gas emissions.

Row 11

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

Insulation

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

1745

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

1094918

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

146744

(7.55.2.7) Payback period

Select from:

<1 year

(7.55.2.8) Estimated lifetime of the initiative

Select from:

Ongoing

(7.55.2.9) Comment

This initiative forms part of our broader program to reduce Scope 1 and Scope 2 greenhouse gas emissions.

Row 12

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

Lighting

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

375

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

174351

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

810446

(7.55.2.7) Payback period

Select from:

4-10 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

Ongoing

(7.55.2.9) Comment

This initiative forms part of our broader program to reduce Scope 1 and Scope 2 greenhouse gas emissions.

Row 13

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in buildings

Maintenance program

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

14

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

3248

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

0

(7.55.2.7) Payback period

Select from:

No payback

(7.55.2.8) Estimated lifetime of the initiative

Select from:

Ongoing

(7.55.2.9) Comment

This initiative forms part of our broader program to reduce Scope 1 and Scope 2 greenhouse gas emissions.

Row 14

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in production processes

Motors and drives

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

1786

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

575758

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

835311

(7.55.2.7) Payback period

Select from:

1-3 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

Ongoing

(7.55.2.9) Comment

This initiative forms part of our broader program to reduce Scope 1 and Scope 2 greenhouse gas emissions.

Row 15

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in production processes

Automation

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

204

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

92060

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

204951

(7.55.2.7) Payback period

Select from:

1-3 years

(7.55.2.8) Estimated lifetime of the initiative

Select from:

Ongoing

(7.55.2.9) Comment

This initiative forms part of our broader program to reduce Scope 1 and Scope 2 greenhouse gas emissions.

Row 16

(7.55.2.1) Initiative category & Initiative type

Energy efficiency in production processes

Compressed air

(7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

1889

(7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 2 (location-based)

(7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

(7.55.2.5) Annual monetary savings (unit currency – as specified in 1.2)

305419

(7.55.2.6) Investment required (unit currency – as specified in 1.2)

[Add row]*

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

Compliance with regulatory requirements/standards

(7.55.3.2) Comment

We replaced refrigerant containing systems with more efficient ones. The Flex sites in China, FuYong and Wuzhong, received an energy management system recertification in 2023 for fulfilling ISO50001 and in 2024 - PTP and Chennai. Four of our facilities in Hungary, San Luis Rio Colorado and Guadalajara North in Mexico and some of our facilities in Malaysia received the RBA factory of choice certification, which is awarded to factories that fully commit to the RBA Code of Conduct and demonstrate leadership through impact and transparency

Row 2

(7.55.3.1) Method

Select from:

- Dedicated budget for energy efficiency

(7.55.3.2) Comment

We have a dedicated budget for energy and water efficiency projects.

Row 3

(7.55.3.1) Method

Select from:

- Employee engagement

(7.55.3.2) Comment

We developed an annual program, called “Earth Day Challenge,” where we invited all our facilities to organize environmental initiatives over two consecutive weeks. As part of the program, employees are encouraged to increase awareness and support of local communities by volunteering their time and expertise. This program contributes to our 2030 Sustainability goals. In 2024, 19,000+ employees contributed 48,000+ volunteer hours to ~880 community activities. During our annual Earth Day Challenge in 2024, employees contributed more than 5,000 volunteer hours toward environmental conservation, protection, and education, impacting over 450,000 beneficiaries.

(7.73) Are you providing product level data for your organization’s goods or services?

Select from:

- No, I am not providing data

(7.74) Do you classify any of your existing goods and/or services as low-carbon products?

Select from:

Yes

(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.

Row 1

(7.74.1.1) Level of aggregation

Select from:

Group of products or services

(7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

Climate Bonds Taxonomy

(7.74.1.3) Type of product(s) or service(s)

Lighting

Conventional LED

(7.74.1.4) Description of product(s) or service(s)

high efficiency modules, inverters, smart meters, solenoids, LED lighting

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

No

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

0

[Add row]

(7.79) Has your organization retired any project-based carbon credits within the reporting year?

Select from:

Yes

(7.79.1) Provide details of the project-based carbon credits retired by your organization in the reporting year.

Row 1

(7.79.1.1) Project type

Select from:

Wind

(7.79.1.2) Type of mitigation activity

Select from:

Emissions reduction

(7.79.1.3) Project description

Vaayu (India) Power Corporation Private Limited

(7.79.1.4) Credits retired by your organization from this project in the reporting year (metric tons CO2e)

15000

(7.79.1.5) Purpose of retirement

Select from:

Voluntary offsetting

(7.79.1.6) Are you able to report the vintage of the credits at retirement?

Select from:

Yes

(7.79.1.7) Vintage of credits at retirement

2013

(7.79.1.8) Were these credits issued to or purchased by your organization?

Select from:

Purchased

(7.79.1.9) Carbon-crediting program by which the credits were issued

Select from:

CDM (Clean Development Mechanism)

(7.79.1.10) Method the program uses to assess additionality for this project

Select all that apply

Investment analysis

Barrier analysis

(7.79.1.11) Approaches by which the selected program requires this project to address reversal risk

Select all that apply

Monitoring and compensation

(7.79.1.12) Potential sources of leakage the selected program requires this project to have assessed

Select all that apply

Ecological leakage

(7.79.1.13) Provide details of other issues the selected program requires projects to address

(7.79.1.14) Please explain

We partnered with the Clean Development Mechanism to deploy emissions reduction projects in China and India. This allowed us to invest in certified projects, including wind, solar, and hydropower. In 2024, our contribution to these projects avoided 29,450 metric tons of GHG emissions, creating environmental and social benefits around the world.

C9. Environmental performance - Water security

(9.1) Are there any exclusions from your disclosure of water-related data?

Select from:

No

(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

Water withdrawals – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

For the vast majority of our sites, the method of measurement for water withdrawals is based on actual water bills/invoices and/or water meter records. Sites report data on a monthly basis, and a regional group validates, reviews, and approves the data. When actual water invoices are not available, we estimate water withdrawals based on the size and type of site.

(9.2.4) Please explain

Water withdrawals are quantified for 100% of sites within our operational control. In 2024, 95% of our total water withdrawals were based on actual water invoices.

Water withdrawals – volumes by source

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

For the vast majority of our sites, the method of measurement for water withdrawals is based on actual water invoices received monthly or quarterly. Water invoices and total water withdrawals are reviewed annually. When actual water invoices are not available, we estimate water withdrawals based on the size and type of site.

(9.2.4) Please explain

Water withdrawals by source are quantified for 100% of sites within our operational control. In 2024, 95% of our total water withdrawals were based on actual water invoices. We monitor all of our water withdrawals by source when actual invoice data is available. We assume that all estimated water is withdrawn from third party sources.

Water withdrawals quality

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

Sites report data based on actual water bills/invoices and/or water meter records on a monthly basis, and a regional group validates, reviews, and approves the data. When actual water invoices are not available, we estimate water withdrawals based on the size and type of site.

(9.2.4) Please explain

The quality of water withdrawals is monitored for 100% of our sites, primarily through our water utilities. We rely upon our utilities to provide suitable quality water. In 2024, 95% of our total water withdrawals were based on actual water invoices.

Water discharges – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Yearly

(9.2.3) Method of measurement

Sites report this data annually based on site-specific estimation as the method of measurement. When site-specific estimation for discharges is not available, discharges are assumed to be equal to withdrawals.

(9.2.4) Please explain

Water discharges are monitored for 100% of our sites within our operational control.

Water discharges – volumes by destination

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Yearly

(9.2.3) Method of measurement

Sites report this data annually based on site-specific estimation as the method of measurement. When site-specific estimation for discharges is not available, discharges are assumed to be equal to withdrawals.

(9.2.4) Please explain

Water discharges by destination are monitored for 100% of our sites within our operational control. The vast majority of our water discharge is to municipal/local off-site/common treatment facilities.

Water discharges – volumes by treatment method

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

Select sites perform monitoring as required by their permits (with specific or general) and submit self-monitoring reports. In some cases, the local authorities also take samples for compliance purposes.

(9.2.4) Please explain

We comply with our internal and external stakeholders' requests at the local and global level. Some of our sites have wastewater discharge permits requiring pre-treatment of industrial waste. The vast majority of our water discharge is to municipal/local off-site/common treatment facilities.

Water discharge quality – by standard effluent parameters

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

At select sites where we do have discharge that we are required to monitor, we perform monitoring as required by our permits (whether specific or general) and submit self-monitoring reports; in some cases, the local authorities also take samples for compliance purposes. For all other sites, this type of monitoring is not applicable.

(9.2.4) Please explain

We comply with our internal and external stakeholders' requests at the local and global level. Some of our sites have wastewater discharge permits requiring pre-treatment of industrial waste. The vast majority of our water discharge is to municipal/local off-site/common treatment facilities.

Water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances)

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

At select sites we perform monitoring as required by our permits (whether specific or general) and submit self-monitoring reports; in some cases, the local authorities also take samples for compliance purposes. For all other sites, this type of monitoring is not applicable.

(9.2.4) Please explain

Over half of our manufacturing and logistic sites continuously monitor water discharge parameters such as Phosphorus, total nitrogen, COD, BOD5, Chlorides, pH, oil & grease, temperature, among others.

Water discharge quality – temperature

(9.2.1) % of sites/facilities/operations

Select from:

Not relevant

(9.2.4) Please explain

We do not run thermal processes; therefore, none of our sites are monitoring water discharge temperature. ii. We do not expect this to be relevant in the future since we do not anticipate changing our business practices.

Water consumption – total volume

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Yearly

(9.2.3) Method of measurement

Water consumption is calculated by subtracting water discharge from water withdrawals as the method of measurement.

(9.2.4) Please explain

Water consumption is monitored for 100% of our sites within our operational control. Sites report on water withdrawal monthly and water discharge annually.

Water recycled/reused

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

Sites report this data on a monthly basis based on the rainwater catchment and water treatment system's readings as the method of measurement, and a regional group validates, reviews, and approves the data. No recycled water is assumed for estimated sites.

(9.2.4) Please explain

Water recycled/reused is monitored for 100% of our sites.

The provision of fully-functioning, safely managed WASH services to all workers

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Daily

(9.2.3) Method of measurement

As part of our daily custodial services, WASH services are monitored daily (frequency of measurement). WASH services are also cleaned daily (method of measurement). We comply with our internal and external stakeholders' requests locally and globally. We have dormitory, kitchen and cafeteria water standards. We require that each dormitory floor provides clean and safe drinking water and access to a hot water supply. All food preparation must be done with potable water.

(9.2.4) Please explain

We provide fully functioning water, sanitation, and hygiene (WASH) services to all employees at 100% of our sites. To recognize the importance of access to WASH, Flex signed the World Business Council for Sustainable Development (WBCSD) Pledge for Access to Safe Water, Sanitation and Hygiene at the Workplace in 2019. This pledge was made to commit to implementing access to safe water, sanitation, and hygiene at the workplace at an appropriate level of standard for all employees in all premises under our direct control.

[Fixed row]

(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?

Total withdrawals

(9.2.2.1) Volume (megaliters/year)

5074

(9.2.2.2) Comparison with previous reporting year

Select from:

Lower

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

Increase/decrease in efficiency

(9.2.2.4) Five-year forecast

Select from:

- About the same

(9.2.2.5) Primary reason for forecast

Select from:

- Investment in water-smart technology/process

(9.2.2.6) Please explain

This year, total water withdrawals were 5,074 megaliters. Water withdrawals decreased 11% from 2023 to 2024 because of changes in production in 2024, leading to less water withdrawn. We consider any decrease in water withdrawals, consumption, or discharges of 10-15% to be "lower" as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business. Total withdrawals equal the sum of total discharges and total consumption ($W = D + C$), because discharges are estimated to be total withdrawals minus total consumption.

Total discharges

(9.2.2.1) Volume (megaliters/year)

3926

(9.2.2.2) Comparison with previous reporting year

Select from:

- Lower

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

- Increase/decrease in efficiency

(9.2.2.4) Five-year forecast

Select from:

- About the same

(9.2.2.5) Primary reason for forecast

Select from:

- Investment in water-smart technology/process

(9.2.2.6) Please explain

This year, total water discharges were 3,926 megaliters. Water discharges decreased 16% from 2023 to 2024 because of changes in production in the reporting year, leading to less water discharged. We consider any decrease in water withdrawals, consumption, or discharges of 10-15% to be “lower” as the prior year. We anticipate future volumes to continue to remain about the same as in 2024 because we do not anticipate major changes in our business. Total discharges equals total withdrawals minus total consumption ($D = W - C$), because discharges are estimated to be total withdrawals minus total consumption.

Total consumption

(9.2.2.1) Volume (megaliters/year)

1148

(9.2.2.2) Comparison with previous reporting year

Select from:

- Higher

(9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

- Increase/decrease in efficiency

(9.2.2.4) Five-year forecast

Select from:

- About the same

(9.2.2.5) Primary reason for forecast

Select from:

- Investment in water-smart technology/process

(9.2.2.6) Please explain

This year, total water consumption was 1,148 megaliters. Water consumption increased 11% from 2024 because of the greater decrease in water discharges over this period due to changes in production in 2024. Total consumption equals the sum of total withdrawals minus the sum of total discharges ($C = W - D$), because consumption is estimated to be total withdrawals minus total discharges. Therefore, because discharges decreased in greater proportion as compared to withdrawals, consumption was higher. We consider any increase in water withdrawals, consumption, or discharges of 10-15% to be "higher" as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

[Fixed row]

(9.2.4) Indicate whether water is withdrawn from areas with water stress, provide the volume, how it compares with the previous reporting year, and how it is forecasted to change.

(9.2.4.1) Withdrawals are from areas with water stress

31.02

(9.2.4.8) Identification tool

Select all that apply

- WRI Aqueduct

(9.2.4.9) Please explain

i) WRI Aqueduct was applied to evaluate whether the water has been withdrawn from stressed areas. We entered the location of all our facilities in the WRI Aqueduct 3.0 water risk assessment tool. As part of our annual water risk analysis, we evaluate locations that (1) are potentially exposed to high or extremely high risk to drought, flood or baseline water stress and (2) represent more than 1% of our global sales. In 2024, we concluded that some of our facilities that consume the largest percentage of water are located in water stressed regions. ii) When comparing with the previous reporting year: we found that the percent of locations water withdrawn from stressed areas decreased. This is due to a focus on water efficiency projects, leading to less water withdrawn at high-risk facilities in 2024 compared to 2023. We consider any decrease in water withdrawals of 10-15% to be “lower” as the prior year.

[Fixed row]

(9.2.7) Provide total water withdrawal data by source.

Fresh surface water, including rainwater, water from wetlands, rivers, and lakes

(9.2.7.1) Relevance

Select from:

Relevant

(9.2.7.2) Volume (megaliters/year)

1.11

(9.2.7.3) Comparison with previous reporting year

Select from:

Much higher

(9.2.7.4) Primary reason for comparison with previous reporting year

Select from:

Increase/decrease in business activity

(9.2.7.5) Please explain

Fresh surface water is relevant because Flex withdraws 0.02% of water withdrawals from this source. 16% are from renewable groundwater, and 84% are from third-party sources. We consider any increase in water withdrawals, consumption, or discharges of more than 25% to be “much higher” as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

Brackish surface water/Seawater

(9.2.7.1) Relevance

Select from:

Not relevant

(9.2.7.5) Please explain

Water from brackish surface water/seawater is not relevant because Flex withdraws 0% of water withdrawals from this source. 0.02% are from fresh surface water, 16% are from renewable groundwater, and 84% are from third-party sources. As Flex has not used this water withdrawal source in prior years, the volume of zero

megaliters is the same as prior years. We consider any change in water withdrawals, consumption, or discharges of less than 10% to be “about the same” as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

Groundwater – renewable

(9.2.7.1) Relevance

Select from:

Relevant

(9.2.7.2) Volume (megaliters/year)

817.8

(9.2.7.3) Comparison with previous reporting year

Select from:

About the same

(9.2.7.4) Primary reason for comparison with previous reporting year

Select from:

Increase/decrease in business activity

(9.2.7.5) Please explain

Renewable groundwater is relevant to Flex because renewable groundwater makes up 16% of our total withdrawals. In 2024, we withdrew 817.8 megaliters from this source, which is 10% lower compared to 2023. Water withdrawals from renewable groundwater are about the same as in 2023 because production hasn't changed since 2023 leading to about the same withdrawals at our facilities which use renewable groundwater. We consider any change in water withdrawals, consumption, or discharges of 0-10% to be “about the same” than the prior year.

Groundwater – non-renewable

(9.2.7.1) Relevance

Select from:

Not relevant

(9.2.7.5) Please explain

Water from non-renewable groundwater is not relevant because Flex withdraws 0% of its water from this source. 0.02% are from fresh surface water, 16% are from renewable groundwater, and 84% are from third-party sources. As Flex has not used this water withdrawal source in prior years, the volume of zero megaliters is the same as prior years. We consider any change in water withdrawals, consumption, or discharges of less than 10% to be “about the same” as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

Produced/Entrained water

(9.2.7.1) Relevance

Select from:

Not relevant

(9.2.7.5) Please explain

Water from produced/process is not relevant because Flex withdraws 0% of its water from this source. 0.02% are from fresh surface water, 16% are from renewable groundwater, and 84% are from third-party sources. As Flex has not used this water withdrawal source in prior years, the volume of zero megaliters is the same as prior years. We consider any change in water withdrawals, consumption, or discharges of less than 10% to be “about the same” as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

Third party sources

(9.2.7.1) Relevance

Select from:

Relevant

(9.2.7.2) Volume (megaliters/year)

4255

(9.2.7.3) Comparison with previous reporting year

Select from:

Lower

(9.2.7.4) Primary reason for comparison with previous reporting year

Select from:

Increase/decrease in business activity

(9.2.7.5) Please explain

Water from third party sources is relevant to Flex because water from third party sources makes up 84% of our total withdrawals. In 2024, we withdrew 4,255 megaliters from this source, which is 11% lower compared to 2023. Water withdrawals from third party sources are lower than 2023 because of water efficiency projects in 2024 leading to lower water withdrawals at our facilities which use third party sources. We consider any decrease in water withdrawals, consumption, or discharges of 10-15% to be "lower" as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

[Fixed row]

(9.2.8) Provide total water discharge data by destination.

Fresh surface water

(9.2.8.1) Relevance

Select from:

Relevant

(9.2.8.2) Volume (megaliters/year)

316

(9.2.8.3) Comparison with previous reporting year

Select from:

About the same

(9.2.8.4) Primary reason for comparison with previous reporting year

Select from:

- Increase/decrease in business activity

(9.2.8.5) Please explain

Discharges to fresh surface water is relevant to Flex because about 8% of Flex discharges are to surface waters. In 2024, we discharged 316 megaliters to fresh surface waters, leading to a 2% increase compared to 2023. Water discharges to fresh surface water are about the same as compared to 2023 because our facilities that discharge to fresh surface water did not see a significant change in production for this source in 2024 compared to 2023. We consider any change in water withdrawals, consumption, or discharges of less than 10% to be “about the same” as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

Brackish surface water/seawater

(9.2.8.1) Relevance

Select from:

- Not relevant

(9.2.8.5) Please explain

Water discharges to brackish surface water/seawater is not relevant because Flex discharges 0% of its water to this source. 8% of water discharges are to fresh surface water, and 92% are to third-party sources. As Flex has not used this water discharge destination in prior years, the volume of zero megaliters is the same as prior years. We consider any change in water withdrawals, consumption, or discharges of less than 10% to be “about the same” as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

Groundwater

(9.2.8.1) Relevance

Select from:

- Not relevant

(9.2.8.5) Please explain

Water discharges to groundwater is not relevant because Flex discharges 0% of its water to this source. 8% of water discharges are to fresh surface water, and 92% are to third-party sources. As Flex has not used this water discharge destination in prior years, the volume of zero megaliters is the same as prior years. We consider any change in water withdrawals, consumption, or discharges of less than 10% to be “about the same” as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

Third-party destinations

(9.2.8.1) Relevance

Select from:

(9.2.8.3) Comparison with previous reporting year

Select from:

Lower

(9.2.8.4) Primary reason for comparison with previous reporting year

Select from:

Increase/decrease in business activity

(9.2.8.5) Please explain

Discharges to third-party sources is relevant to Flex because about 92% of Flex discharges are to third-party sources. In 2024, we discharged 3,610 megaliters to third-party sources, leading to a 17% decrease compared to 2023. Water discharges to third-party destinations are about the same than in 2023 due to approximately the same production at our facilities which discharge to third-party destinations. We consider any change in water withdrawals, consumption, or discharges of 10-24% to be “lower” as the prior year. We anticipate future volumes to remain about the same since we do not anticipate major changes in our business.

(9.13.1.3) Please explain

Flex monitors its products to ensure compliance with global environmental directives and regulations. Processes are in place to screen, mitigate, and notify all stakeholders involved. Flex also closely monitors updates from global environmental regulatory bodies such as ECHA to stay ahead.

Row 3

(9.13.1.1) Regulatory classification of hazardous substances

Select from:

EU Persistent Organic Pollutants (POPs) Regulation

(9.13.1.2) % of revenue associated with products containing substances in this list

Select from:

61-80

(9.13.1.3) Please explain

Flex monitors its products to ensure compliance with global environmental directives and regulations. Processes are in place to screen, mitigate, and notify all stakeholders involved. Flex also closely monitors updates from global environmental regulatory bodies such as ECHA to stay ahead.

Row 4

(9.13.1.1) Regulatory classification of hazardous substances

Select from:

- List of substances (Canadian Environmental Protection Act)

(9.13.1.2) % of revenue associated with products containing substances in this list

Select from:

- 61-80

(9.13.1.3) Please explain

Flex monitors its products to ensure compliance with global environmental directives and regulations. Processes are in place to screen, mitigate, and notify all stakeholders involved. Flex also closely monitors updates from global environmental regulatory bodies such as ECHA to stay ahead.

Row 5

(9.13.1.1) Regulatory classification of hazardous substances

Select from:

- Other, please specify :Annex XIV of UK REACH Regulation, Candidate List of Substances of Very High Concern (UK Regulation), EU RoHS, China, RoHS, CA Proposition 65, PFAS (ESP/ ECHA/Canada), TSCA, Packaging Directive 94/62/EC, Battery Directive 2013/56/EU

(9.13.1.2) % of revenue associated with products containing substances in this list

Select from:

- 61-80

(9.13.1.3) Please explain

Flex monitors its products to ensure compliance with global environmental directives and regulations. Processes are in place to screen, mitigate, and notify all stakeholders involved. Flex also closely monitors updates from global environmental regulatory bodies such as ECHA to stay ahead.

[Add row]

(9.14) Do you classify any of your current products and/or services as low water impact?

(9.14.1) Products and/or services classified as low water impact

Select from:

- No, but we plan to address this within the next two years

(9.14.3) Primary reason for not classifying any of your current products and/or services as low water impact

Select from:

- Important but not an immediate business priority

(9.14.4) Please explain

A critical component of our environmental stewardship approach is the responsible management of water resources around the globe. We evaluate the impact of water use at each of our facilities to prioritize mitigation operations in water-scare locations. Overall, we aim to decrease consumption wherever possible. Where water use is more intensive, we leverage recycled options and install collection systems to use rainwater for irrigation and cooling processes. We draw water from municipal sources at most of our facilities and discharge wastewater to public treatment systems. While our products and services are not currently low water impact, as we continue our commitment to water stewardship, we'd like to explore this classification in coming years.

[Fixed row]

(9.15) Do you have any water-related targets?

Select from:

- Yes

(9.15.1) Indicate whether you have targets relating to water pollution, water withdrawals, WASH, or other water-related categories.

Water pollution

(9.15.1.1) Target set in this category

Select from:

- No, and we do not plan to within the next two years

(9.15.1.2) Please explain

Flex has company-wide, business level, and site/facility specific targets and goals, however they do not cover water pollution at this time. Flex 2030 water goals: 1) Reduce water withdrawn per revenue by 5%, focusing on sites located in water scarce areas, by 2025. Our company approach to setting water-related targets and goals is focused on creating a global culture around resource conservation (including water and energy). Therefore, our 2030 environmental goals apply to all operational locations. Each operational location must define as part of their environmental management system their own goals and targets to meet corporate, customer and regulatory requests. Flex goal progress, including progress at a site level, is monitored monthly through a scorecard and reported to top management on a quarterly basis. External updates are done annually.

Water withdrawals

(9.15.1.1) Target set in this category

Select from:

Yes

Water, Sanitation, and Hygiene (WASH) services

(9.15.1.1) Target set in this category

Select from:

No, but we plan to within the next two years

(9.15.1.2) Please explain

Flex has company-wide, business level, and site/facility specific targets and goals, however they do not cover water pollution at this time. Other

(9.15.1.1) Target set in this category

Select from:

No, and we do not plan to within the next two years

(9.15.1.2) Please explain

Flex does not plan to develop other water targets in the next two years

[Fixed row]

(9.15.2) Provide details of your water-related targets and the progress made.

Row 1

(9.15.2.1) Target reference number

Select from:

Target 1

(9.15.2.2) Target coverage

Select from:

Organization-wide (direct operations only)

(9.15.2.3) Category of target & Quantitative metric

Water withdrawals

Reduction in total water withdrawals

(9.15.2.4) Date target was set

12/31/2021

(9.15.2.5) End date of base year

12/31/2019

(9.15.2.6) Base year figure

55

(9.15.2.7) End date of target year

12/31/2025

(9.15.2.8) Target year figure

52.3

(9.15.2.9) Reporting year figure

50.2

(9.15.2.10) Target status in reporting year

Select from:

Achieved

(9.15.2.11) % of target achieved relative to base year

178

(9.15.2.12) Global environmental treaties/initiatives/ frameworks aligned with or supported by this target

Select all that apply

None, alignment not assessed

(9.15.2.13) Explain target coverage and identify any exclusions

Reduce water withdrawn per revenue by 5%, focusing on sites located in water scarce areas, by 2025. Flex 2030 water goals: 1) Reduce water withdrawn per revenue by 5%, focusing on sites located in water scarce areas, by 2025. Our company approach to setting water-related targets and goals is focused on creating a global culture around resource conservation (including water and energy). Therefore, our 2030 environmental goals apply to all operational locations. Each operational location must define as part of their environmental management system their own goals and targets to meet corporate, customer and regulatory requests.

Flex goal progress, including progress at a site level, is monitored monthly through a scorecard and reported to top management on a quarterly basis. External updates are done annually.

(9.15.2.15) Actions which contributed most to achieving or maintaining this target

In 2024 we continued to progress towards our goal of reducing water withdrawn per revenue by 9%, from our 2019 baseline, focusing on sites located in water scarce areas, by 2025. We've implemented water conservation initiatives, such as smart sprinkler systems and water recycling and cooling tower technologies.

(9.15.2.16) Further details of target

Threshold of success: 5% of water withdrawals reduction at water-risk sites. 2024 goal status: Achieved and maintained 2024 % achieved: 178% The water withdrawal target has been achieved as of 2024.

C13. Further information & sign off

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party?

	Other environmental information included in your CDP response is verified and/or assured by a third party
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used?

Row 1

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

Water

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Water security

Other data point in module 9, please specify :Water recycled and % recycled water

(13.1.1.3) Verification/assurance standard

General standards

ISAE 3000

(13.1.1.4) Further details of the third-party verification/assurance process

As part of our continual improvement process, we added a 3rd party verification process for recycled water and we plan to extend this to other water data in the future. The standard was defined by the 3rd party based on their own expertise. We plan to do so on an annual basis going forward.

Row 2

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Climate change

Year on year change in absolute emissions (Scope 1 and 2)

(13.1.1.3) Verification/assurance standard

General standards

ISAE 3000

(13.1.1.4) Further details of the third-party verification/assurance process

The 2024 vs 2023 change in scope 1 and location-based scope 2 emissions, as well as scope 1 and market-based scope 2 emissions were verified.

Row 3

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Climate change

Year on year change in absolute emissions (Scope 3)

(13.1.1.3) Verification/assurance standard

General standards

ISAE 3000

(13.1.1.4) Further details of the third-party verification/assurance process

The 2024 vs 2023 change in scope 3 emissions were verified for Fuel- and Energy-Related Activities, waste, and business travel.

Row 4

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Climate change

Renewable Electricity/Steam/Heat/Cooling generation

(13.1.1.3) Verification/assurance standard

General standards

ISAE 3000

(13.1.1.4) Further details of the third-party verification/assurance process

The 2024 electricity generated on site from renewable source was verified.
