

Innovating on the road to autonomy

The autonomy of tomorrow is built on the advanced driver assistance systems of today.

With design, development, and manufacturing capabilities for L2 to L4 compute and advanced sensors, Flex provides the key hardware for the future of mobility.

By leveraging our considerable automotive experience and cross-industry cloud server solutions expertise, we're helping our partners on the journey to full autonomy.

Together, we're making the road ahead a safer place to be.

A comprehensive view of the future

At Flex, we build hundreds of millions of products and technologies every year, from cloud server solutions to EV charging stations.

Our automotive portfolio is focused on the key mobility megatrends that are most impacting our lives. We have decades of automotive design experience and collaborate with the entire mobility ecosystem, including OEMs, technology providers, and key diverse suppliers around the globe.

Next generation mobility is in motion.

Our solutions:

Autonomy/ADAS

Providing the scalable compute and sensing technologies needed to enable a future of increased mobility and zero accidents.

Connectivity

Offering the core vehicle architecture building blocks to advance the complex needs of tomorrow's software-defined vehicle.

Electrification

Award-winning solutions designed to accelerate the transition from internal combustion engines to zero-emission dedicated EV platforms.

Smart Tech

Designing and delivering the next generation of smart automotive technologies that support a rich, seamless user experience.

Product Spotlight:

Scalable Autonomous Compute

An autonomous compute module is the "brain" of an autonomous or ADAS system, taking in data and making driving decisions based on that data. At Flex, we provide full design and manufacturing of compute hardware and work directly with our partners to ensure their systems are as safe and convenient as possible.

Flex (Reg. No. 199002645H) is the manufacturing partner of choice that helps a diverse customer base design and build products that improve the world. Through the collective strength of a global workforce across 30 countries and responsible, sustainable operations, Flex delivers technology innovation, supply chain, and manufacturing solutions to diverse industries and end markets.
